Dear Customer,

Three years ago we introduced a new format for the BOLA catalogue and judging by your positive feedback it has been well received.

We are always looking for ways to improve communications with our customers and our marketing team is constantly targeting easier to use and more interesting publications.

As an example, BOLA Practical Tips developed by in-house experts at Bohlender list many useful aids in the successful use of our products. I am sure you will enjoy reading our customer feedback section as much as we do; they illustrate clearly the wide range of user benefits of the BOLA product line.

The list of 10 Frequently Asked Questions (FAQs) gives answers to the queries most often raised by our customers.

Progress with attention to detail. Exactly like your personal BOLA favourites on the more than 250 pages of this catalogue. Also in the future, it remains our aim to offer you best performance. We hope that we have succeeded again.

Best regards,

A handwritten signature in blue ink, appearing to read 'V. Bohlender', written in a cursive style.

Volker Bohlender

Managing Director

BOLA stands for well-proven, sophisticated and nearly indestructible labware made of high-performance plastics.

Developed by our specialists, manufactured in-house.

With accuracy and attention to detail.

On request even custom made.

Welcome to BOLA!

What you should know about BOLA

6

FREQUENTLY ASKED QUESTIONS

1 Why shall I use Labware made of high-performance plastics?

Fluoroplastics such as PTFE and other offer unique properties such as universal chemical resistance, unbreakable, easy to clean, can be sterilized....ideal for the work in the lab!

2 What kind of products can I expect here?

E. g. stirrer shafts, screw joints, tubing, ground joint components, and many more. Optimally adapted to the needs in chemistry, pharmacy and industry.

3 What makes BOLA and BOLA products particular?

The fabrication in-house permits constantly high quality. We know our customers' business and answer fast to new requirements.

4 Where and how do you manufacture the products?

At our headquarters in Grünsfeld, Southern Germany. Experienced staff and modern production technology are the key for progressive products.

5 Who stands behind BOLA?

BOLA stands for Bohlender lab equipment – family operated in second generation by Volker Bohlender. Team spirit and fairness are practised at BOLA.

6

Can I get customized products as well?

Of course – your special requirements are welcome! No matter if you need a modification or a complete new item: Just provide a simple sketch and we produce to your requirements!

7

How do you get the BOLA products?

You place your order by fax, phone, letter, e-mail or in our online shop. Orders are executed by our distributors for labware. General lead times: 1 working day within Germany, 3-5 working days within the EU.

8

What happens if I should not be happy with the product?

Give us a call, send a fax or drop an e-mail. We take immediately care of your request and will arrange either a fast exchange or rework. It can be necessary to return the product for further examination.

9

Where can I get more information?

See our homepage www.bola.de or ask for our regular e-mail newsletter for latest information on our products

10

Are there any discounts...?

Good question: For bulk orders we grant discounts and special prices (except for customized items). Please contact us.

261 Our Commitment

BOLA – Best performance for your lab.

10

More flexibility.

Having design and production in house makes it possible to realise efficiently your requirements. We are open to any special requests. Please send us a drawing or sketch and our design department will start work.

BOLA BENEFITS

More service.

Some enquiries are urgent. We are well prepared and keep the majority of our extensive product range in stock. Our efficient, well-established workflow assures shipment of your order at short notice. Waiting times and unnecessary shut downs can be prevented. You have no time to lose? We are here to help.

BOLA BENEFITS

More expertise.

Each of our products has been designed by ourselves, thoroughly tried and tested as well as continuously improved and adapted to your everyday needs. Should you have any questions or requests, our professionals will give you expert advice.

BOLA BENEFITS

Our **quality** commitment

BOLA products are manufactured in-house and are made of high-performance plastics with best material properties. We thoroughly control the quality of the raw materials.

Production is exclusively made by experienced and qualified staff at our headquarters in Grünsfeld, Southern Germany.

During the complete manufacturing process we strictly observe the standards of DIN EN ISO 9001.

As to products marked as FDA conform, we assure that all parts coming into contact with the medium are made of materials that correspond to FDA requirements.

All employees and I guarantee for the high quality of the complete range of BOLA products.

Thank you for your trust.

Volker Bohlander

Managing Director

Grünsfeld, March 2012

Made to measure.

12

BOLA offers custom manufacture.

Every lab is different. By offering an extensive range of established and sophisticated standard solutions we take into account the varied requirements of the respective branches and sectors.

But maybe you are looking for something special? Something that is not included in our standard product range?

In that case we are able to offer an individual custom manufacture. This is easier and faster than you may expect. Discuss your idea with our professionals. They will give advise and support during design. Finally, your idea will become real: We produce as per your requirements and in compliance with the chosen raw materials – already from 1 piece.

We only need a drawing (a sketch is sufficient) and some further information

» You have a special request?

Give us a call: +49 (0) 93 46-92 86-0.

Or complete the attached form for custom enquiries including your contact details and return it by fax. We will be in touch to discuss details and provide you with a free quotation.

Checklist for your custom product.

- » Please describe the product required.
- » What is the application?
- » Which are the critical dimensions and tolerances?
- » Please specify material requirements.
- » Please specify the operating temperature range.
- » What is the chemical load?
- » Please state quantities?
- » What is the budgetary price range per piece?

This icon marks products which are especially suitable for individual modification.

Our basic principles

» One contact person for all your questions.

Highly qualified staff and continuous product training assure professional consultancy also for technical problems.

» Fast and reliable delivery.

Our modern production technology combined with optimised processes from production planning up to despatch assure a fast execution of your order.

» Accuracy is our passion.

We have great experience in all kind of processing of fluoroplastics in house. Continuous quality assurance from choosing suitable raw materials and throughout the whole manufacturing process.

» Everything for the modern lab.

Extensive range of lab equipment to meet the requirements of modern labs for nearly every application.

» Virtually all your desires will be fulfilled.

We can make products to your specification starting with 1 piece up to large-scale production. A sketch or drawing is sufficient. Reproducibility is assured by accurate technical documentation.

» We understand your requirements.

Many years of experience with processing of fluoroplastics.

Also made by Bohlender.

Stirring and Mixing

Magnetic stirring bars and stirrer shafts have to feature many different qualities since they are used with many different products and in different vessels. The comprehensive BOLA range is offering the best possible solution – if not, we will manufacture according to your specifications.

PRODUCT TIPS

Stirrer Coupling

BOLA Stirrer Shafts

What you should know about BOLA Stirrer Shafts

BOLA Stirrer Shafts consist of a PTFE-jacketed stainless steel shaft and a stirrer blade made of solid PTFE. The stainless steel core provides high mechanical stability and allows a safe fixing in the agitator.

Unbreakable

All glass stirrer shafts which are commonly used in laboratories are very fragile. Dropping, stirring solid materials or too much power transmitted from the agitator to the product can cause broken glass. Due to their solid stainless steel core, BOLA Stirrer Shafts are protected against all these possibilities of breaking.

Universal chemical resistance

Due to the thick PTFE-jacket, the product which is stirred is only exposed to PTFE. This assures an almost universal chemical resistance. PTFE-jacketed stirrer shafts can be used whenever stirrer shafts made of PP (polypropylene), glass or stainless steel are not sufficient.

Temperature resistance

Stirrer shafts made of PP (polypropylene) are deformed at temperatures exceeding +100°C and cannot be used any longer. All BOLA PTFE-jacketed stirrer shafts can be used at temperatures of up to +250°C without any negative effects on their chemical resistance.

Non-adhesive

The surfaces of glass and stainless steel stirrer shafts allow adhesion of products (in particular such as dyes and glues). BOLA PTFE Stirrer Shafts, however, are non-adhesive and therefore eliminate adhesion of dyes and glues.

Interchangeability

At present, most stirrer shafts used in laboratories are made of glass. All BOLA Stirrer Shafts are available with the same diameters, lengths and surface qualities (KPG) as stirrer shafts made of glass. Thus, the user can easily replace the glass stirrer shaft with a PTFE-jacketed stirrer shaft and does not have to change agitators, couplings and guiding devices.

Safe fixing

The upper end of the BOLA Stirrer Shaft is not jacketed with PTFE and can therefore be fixed safely into the agitator or the stirrer coupling.

Solid stirrer blade

The stirrer blade is fixed tightly to the stirrer shaft and cannot be loosened by the product which is still turning after switching off the agitator. The stirrer shafts are suitable for clockwise and counterclockwise rotation.

Frequently asked: Why don't you coat stirrer shafts?

Coating with PTFE only provides a thin plastic layer. This layer can be damaged very easily by aggressive products, friction or rough handling during storage. A possible consequence is that parts of the layer are peeled off.

The BOLA solution: A solid PTFE jacket together with solid stirrer blades. BOLA Stirrer Shafts provide a long durability and an excellent mechanical resistance.

Results of stirring – tested for you

In order to help you choose the suitable stirrer shaft for your application, we have made tests with typical data. These graphs shall give you an indication for the stirring effects of the BOLA Stirrer Shafts.

- » Speed: 500 rpm
- » Volume: 2.000 ml
- » Product: water
- » Temperature: 20°C
- » Vessel: glass beaker

Suitable chucking diameter of stirrer shafts

Very long stirrer shafts need to have suitable diameters to be stable enough. All BOLA Stirrer Shafts have adequate diameters and lengths. If the chucking diameter of a stirrer shaft is too big, it can mostly be reduced by machining. This machining has to be made totally self-centring to avoid eccentricity of the stirrer shaft.

Please contact us if you need a reduced chucking diameter (see page 34).

BOLA Propeller Stirrer Shafts

BESTSELLER

Material: PTFE Temperature resistance: from -200°C to + 250°C Chemical resistance: +++ universal Stirring effect: bottom-up

Product description:

PTFE-jacketed stainless steel shaft, propeller completely made of PTFE with three 45° angled round or angular blades. Universal chemical resistance since the product is only exposed to PTFE.

 Additional stirrer paddles

BOLA Gassing Stirrer

Material:	Temperature resistance:	Chemical resistance:	Vacuum:	autoclave:
PTFE	from -200 °C to +250 °C	+++ universal	suitable	121°

Product description:

PTFE-jacketed stainless steel shaft, propeller with four blades completely made of PTFE. Clockwise rotation of the shaft produces a vacuum behind the stirrer blades. By this vacuum, the gas is transported from the gas compartment through the hollow shaft and into the product. The rotation speed depends on the fluid level and the immersion depth: e. g. 430 rpm are necessary at 150mm, and 690 rpm are necessary at 350 mm. The length of the shaft and the suction pipe can be adapted individually. Minimum one baffle is imperative for proper operation (Cat.No. C 490-..). Universal chemical resistance, the product is only exposed to PTFE.

657	10	8	72	12	20	387	C 488-20

Applications:

Reduced reduction times compared to stirring without gassing due to high aeration of the product. Strong radial flow, ideal for gassing of liquids.

BOLA Slip-On Baffle

Material:	Temperature resistance:	Chemical resistance:	Vacuum:	autoclave:
PTFE	from -200 °C to +250 °C	+++ universal	suitable	121°

Product description:

Completely made of PTFE, supporting ring made of PFA. The baffle can be mounted at any position on a temperature probe or a solo stirrer shaft. Design based on DIN 28131. Universal chemical resistance, the product is only exposed to PTFE.

Stirrer Shafts

At BOLA we get custom made stirrer shafts with exactly the dimensions that we require. This way we achieve optimal mixing of our products in glass reactors.

Dieter Waldhaus » Merck KGaA

BOLA Stirrer Shafts with Reduced Chucking Diameter (RCD)

For some applications, it is necessary to use very long stirrer shafts. These stirrer shafts must have suitable diameters to be stable enough. It can occur that the chucking diameter of these long stirrer shafts is too big for the agitator. All BOLA Stirrer Shafts listed below have a professionally reduced chucking diameter of 10 mm and can be fixed safely in all common agitators.

You need a smaller diameter, or a different stirrer shaft? No problem: Simply indicate the requested diameter and the catalogue number of the stirrer shaft.

Material: PTFE Temperature resistance: from -200°C to + 250°C Chemical resistance: +++ universal

A BOLA Stirrer Shafts with Blade RCD

PTFE-jacketed stainless steel shaft, blade completely made of PTFE. Universal chemical resistance since the product is only exposed to PTFE. Blade dimensions see Cat. No. C 381-.. on page 27.

45/40	25			C 425-53
45/40	32			C 425-55

Applications:

Spare part for BOLA Glass Stirrer Bearings

BOLA Special Stirrer Bearings

Material:	Temperature resistance:	Chemical resistance:	Pressure:	Vacuum:
PTFE	from -200°C to + 250°C	+++ universal	low	suitable

Product description:

The 29/32 ground joint of these bearings provides a safe seat in the reactor lid. The stirrer shaft is held by an invisible shaft guide made of borosilicate glass which has an adjustable vacuum sealing. The stirrer can be adjusted in height by means of a lock nut. There is no abrasion. A cooling tank for an optional lubricant against overheating is also included. Suitable for vacuum up to at least 700 mm Hg and for low overpressure. Speeds of up to 500 rpm – temporarily even 1000 rpm - are admissible.

FDA conform

Ground Joint NS	For stirrer shafts dia. mm			Cat. No.:
29/32	8			C 430-20

For ground joint NS 29/32

BOLA Stirrer Blades

Why have stirrer blades to be „tiltable“?
 Only a tiltable stirrer blade can be pulled through a narrow neck.

All BOLA Stirrer Blades have a central bore to fix them on a shaft. It is important that this bore is slightly out of the middle. Otherwise, it would be difficult to draw a shaft with mounted blade through

e.g. a NS 29 neck of a round bottom flask.
 By the way: As soon as the shaft rotates, the centrifugal forces push the blade into the correct horizontal position and optimal mixing is assured.

Blocked: The blade does not tilt and cannot be removed from the vessel.

How it should be: The blade has an excentric bore. It tilts and can easily be removed from the vessel.

BOLA Moon-Shaped Stirrer Blades

Material: **PTFE** Temperature resistance: **from -200°C to + 250°C** Chemical resistance: **+++ universal**

BOLA Stirring Bars

What you should know about magnetic stirring and mixing

For optimum results, both drive magnet and stirring bar are decisive. For optimum efficiency, the distance between the magnetic poles of the drive magnet and the length of the stirring bar should be equal. A magnetic stirring bar which is too small will eventually gravitate toward one of the poles of the drive magnet. Stirring efficiency is influenced by the material, by the thickness of the cover plate and the thickness of the vessel. For the best magnetic coupling, the distance between the magnets should be minimized.

What you should know about the choice of stirring bars

Improperly selected stirring bars are often cause flickering of the bars in the vessel, respectively ineffective mixing of the product. You can find an overview of the most common stirring bars here below:

Cylindrical Magnetic Stirring Bars:

They are the most commonly used magnetic stirring bars. Due to their simple shape they can be offered at very attractive prices. Cylindrical magnetic stirring bars offer excellent centering and smooth running characteristics.

Glass Magnetic Stirring Bars:

They have a non-porous and smooth glass-coating. All following processes are not affected by any carry-over. There is an increased abrasion between glass vessels and glass stirring bars.

Ultra Magnetic Stirring Bars:

These magnetic stirring bars have very smooth and seamless surfaces. No substance can penetrate into their surfaces and thus, all following processes are not affected by any „carry-over“. They are mainly used for high-purity work or trace analysis

Power Magnetic Stirring Bars:

Due to special magnetic material, their torque loads are larger than those of conventional magnetic stirring bars. Power magnetic stirring bars are mainly used for agitating viscous liquids or for bridging larger distances between the magnetic stirring machine and the magnetic stirring bar.

HELPFUL: page 253
Detailed information on magnetic stirring

Square Magnetic Stirring Bars:

They are particularly suitable for big vessels due to the high magnetic force. Solids are released or removed from the bottom of the vessel.

Egg-Shaped Magnetic Stirring Bars:

They are particularly suitable for round-bottom flasks. Their shape mimics that of the flasks and assures complete mixing. Those magnetic stirring bars have an egg-shaped magnetic core which assures a better force transmission than a cylindrical core.

Triangular Magnetic Stirring Bars:

Such magnets are useful for mixing reagents which resist dissolving or for avoiding any residues at the bottom of the vessels. They provide strong turbulence at relatively low speeds.

Magnetic Stirring Bars with Pivot Ring:

Their interrupted surface provides greater surface area and added turbulence. Only their pivot ring and one end of the magnetic stirring bar touch the bottom of the vessel. Therefore these magnetic stirring bars have a more steady spinning position and a better longevity.

Star Head Magnetic Stirring Bars:

Optimum stirring in tall, narrow diameter vessels. Ideal stirring bar for cuvettes or test tubes.

Center Magnetic Stirring Bars:

These magnetic stirring bars provide better stirring action and a more stable spinning position due to the punctual position.

Tolerances of the magnetic stirring bars

» The dimensions of the magnetic stirring bars are nominal dimensions which can have a tolerance of +/- 5% in length and +/- 10% in diameter.

Results of stirring – tested for you

In order to help you choose the suitable magnetic stirring bar for your application, we have made tests with these data under real conditions. You will find graphs for each magnetic stirring bar on the next pages.

- » **Speed:** 500 rpm
- » **Volume:** 2.000 ml
- » **Product:** water
- » **Temperature:** 20°C
- » **Vessel:** glass beaker

We “meliorate” your specific magnetic stirring bars

- » These stirring bars can for example be built in devices or can be used for special applications
- » The diameter of the magnetic stirring bars can be machined with a tolerance of up to +/- 0,02 mm
- » The magnetic stirring bars are ground to obtain a seamless amplitude
- » The ends are polished to receive a round or any other shape
- » The surface is becoming extremely smooth and even, so that contaminations cannot adhere
- » Reproducibility both in diameter and surface are granted

BOLA Cylindrical Magnetic Stirring Bars

BOLA Practical Tipp

Uwe Hossfeld » application engineering

Your magnetic stirring bar flutters?

To prevent this, the lengths of driving magnet in the stirrer and stirring bar should be approximately the same. In addition, the distance between these two should be as small as possible.

BOLA Square Magnetic Stirring Bars

Material: **PTFE** Temperature resistance: **from -200°C to + 250°C** Chemical resistance: **+++ universal**

Product description:

PTFE-encapsulated magnetic core (Alnico 5), universal chemical resistance.

FDA conform

Dimensions mm	Cat. No.:
14 x 14 x 45	C 361-03
14 x 14 x 90	C 361-06

Applications:

They are particularly suitable for big vessels, strong turbulences at low speed; solids are released or even avoided.

BOLA Magnetic Stirring Bars with Pivot Ring

Material: **PTFE** Temperature resistance: **from -200°C to +250°C** Chemical resistance: **+++ universal**

Product description:

PTFE-encapsulated magnetic core (Alnico 5), cylindrical shape with pivot ring, universal chemical resistance.

FDA conform

Length mm	Dia. mm	Cat. No.:	Length mm	Dia. mm	Cat. No.:
8	3	C 354-02	35	6	C 354-20
12	5	C 354-05	40	8	C 354-23

Removing magnetic stirring bars

Even for aggressive liquids you can use our magnetic stirring bar retriever which is also available with a very strong magnet.

see page 56

SUITABLE: page 56

Powerful magnetic stirring bar retrievers

BOLA Magnetic Stirring Bar Set

Material: **PTFE** Temperature resistance: **from -200°C to +250°C** Chemical resistance: **+++ universal**

Product description:

Consisting of the most common magnetic stirring bars and a retriever with a length of 150 mm. Each one piece of:

Cylindrical 10 x 6, 15 x 4,5, 20 x 6, 25 x 6, 30 x 6, 40 x 8, 50 x 8, 60 x 9;
Pivot ring 15 x 5, 25 x 6, 40 x 8;
Triangular 25 x 8, 40 x 14

FDA conform

Dimensions of box mm	Cat. No.:
175 x 110 x 30	C 348-10

Applications:

Ideal for beginners, for testing different kinds and dimensions of magnetic stirring bars

BOLA Triangular Magnetic Stirring Bars

Material: PTFE Temperature resistance: from -200°C to + 250°C Chemical resistance: +++ universal

Product description:

PTFE-encapsulated magnetic core (Alnico 5), universal chemical resistance.

FDA conform

Length mm	Dia. mm	Edge length mm	Cat. No.:

70	20	10.000	C 358-16

Applications:

Ideal for stirring in round bottom flasks. Shape mimics that of the flasks and assures complete mixing.

BOLA Power Magnetic Stirring Bars

Material: **PTFE** Temperature resistance: **from -200°C to + 250°C** Chemical resistance: **+++ universal**

Product description:

PTFE-encapsulated magnetic core made of a very strong magnetic material (rare earth magnet samarium-cobalt), torque loads transmitted are about 4 times larger than those of conventional magnetic stirring bars. No risk of demagnetization, sterilisable, extremely smooth surface avoiding contaminations, universal chemical resistance.

FDA conform

Length mm	Dia. mm	Cat. No.:
20	8	C 365-20
40	14	C 365-40
50	19	C 365-50

Applications:

They are mainly used for agitating viscous liquids or for bridging larger distances between the magnetic stirring machine and the magnetic stirring bar. Optimum mixing in vessels with a big volume or in tall graduated cylinders.

BOLA INNOVATION

Power Magnetic Stirring Bars

The Samarium-Cobalt rare-earth magnet is encapsulated in PTFE. Compared with common magnetic stirring bars, its torque is four times higher. These stirring bars are ideal for mixing highly viscous liquids.

BOLA Ultra Magnetic Stirring Bars

Material: **PTFE** Temperature resistance: **from -200°C to + 250°C** Chemical resistance: **+++ universal**

Product description:

PTFE-encapsulated magnetic core (Alnico 5), extremely smooth and seamless surfaces, no substance can penetrate, universal chemical resistance.

FDA conform

Length mm	Dia. mm	Cat. No.:

Safe and quiet mixing, optimum stirring due to stable position

BOLA Beakerliner

Material: PTFE	Temperature resistance: from -200 °C to +250 °C	Chemical resistance: +++ universal	Vacuum: suitable	autoclave: 121°
--------------------------	---	--	----------------------------	---------------------------

Product description:

PTFE-encapsulated magnetic core (Alnico 5) axially mounted in a guide cage made of PTFE, universal chemical resistance.

NEW

FDA conform

for Beakers low from ml	cage O.D. mm	cage height mm	stirring bar length mm	Cat. No.
250, 400	67	21	50 x 8	C 362-08
600, 800, 1.000	74	29	60 x 10	C 362-12
2.000	103	32	80 x 10	C 362-16
3.000, 5.000	125	48	106 x 25	C 362-20

Applications:

No shear action on the bottom of the beaker, smooth running in glass beakers also on an uneven bottom. The cage acts like a baffel and thus provides optimum mixing results.

BOLA INNOVATION

Beakerliner

A magnetic stirring bar mounted in a guide cage prevents shear action on the bottom of the beaker. The liquid is mixed carefully. Easy handling since the cage can easily be inserted or removed.

BOLA Tandem Magnetic Stirring Bars

Material: PTFE	Temperature resistance: from -200°C to + 250°C	Chemical resistance: +++ universal
--------------------------	--	--

Product description:

PTFE-encapsulated magnetic cores (Alnico 5), center bore for receiving the BOLA Bearing Neck or a glass neck (available from a glassblower), universal chemical resistance. Bearing neck not included in delivery.

FDA conform

Magnetic stirring bar length x O.D. mm	Bearing neck dia. mm	Recommended height of neck mm	Block dimensions mm	Cat. No.:
40 x 10	8	15	34 x 14 x 14	C 363-26
55 x 12	8	19	44 x 18 x 14	C 363-30
110 x 24	12	37	84 x 36 x 36	C 363-36
155 x 24	12	37	84 x 36 x 36	C 363-39

Extremely strong mixing of the product, ideal transmission of the magnetic force of the stirrer to the tandem magnetic stirring bar. Reduction of running surface to a ring minimizes friction and increases lifespan. Tandem magnetic stirring bars do not touch the bottom and therefore do not wear.

BOLA Bearing Necks

Material: PTFE / compound
 Temperature resistance: from -200°C to + 250°C
 Chemical resistance: +++ universal

Product description:

Very hard PTFE-PEEK compound, for receiving a BOLA Tandem Magnetic Stirring Bar, center fixing on the bottom of the vessel by means of glue (we recommend silicone; hardened in water), universal chemical resistance.

Distributors for Bottles

Page 67
Laboratory Screw Joints

Page 112
GL Tube Fittings T EX

The Modular Construction System

What you should know about the GL screw joint system.

A universal screw joint system, developed for connecting tubes or tubing (PTFE, PFA, FEP) with glass or metal tubes. The system provides a pressure resistance of up to 10 bar at room temperature.

The universal chemical resistance of the fluoroplastic materials allows the application of the GL screw joint components with almost every liquid and gas.

The fittings and stopcocks are made of pure PTFE. Assembled with the BOLA HT Laboratory Screw Joints, they are resistant to temperatures up to +250°C.

You can combine different components with GL thread to create a complete equipment:

e.g. Basic Scrubber Bottle

- A** GL Bellow
Cat. No.: H 902-05
see page 95
- B** GL Tube Fitting Elbow
Artikel-Nr.: D 539-25
see page 99
- C** GL Stopcock
Cat. No.: E 684-14
see page 103
- D** GL Tube Fitting T
Cat. No.: D 540-14
see page 99
- E** Reducing Screw Thread
Adaptor Coupling
Cat. No.: H 904-03
see page 95

e.g. Sampling Unit

- A** GL Ball Valve
Cat. No.: E 664-10
see page 105
- B** Threaded Coupling
Cat. No.: H 900-01
see page 94
- C** Multiple Distributor for Bottles
Cat. No.: D 614-08
see page 72
- D** GL Ball Valve
Cat. No.: E 667-10
see page 105
- E** GL Tube Fitting Elbow
Cat. No.: D 539-14
See page 99

All advantages at a glance:

- » easily screwable without any tooling
- » optionally extensible
- » independent from tubing diameters
- » compatible with glass equipment with GL thread
- » many creative possibilities
- » no determination at the beginning of assembly

e.g. **Dosing Column**

- A** Reducing Screw Thread
Adaptor Coupling
Cat. No.: H 904-03
see page 95
- B** GL Stopcock
Cat. No.: E 684-14
see page 103
- C** HT Laboratory Screw Joint
Cat. No.: D 628-82
see page 69
- D** Flexible Tubing
Cat. No.: S 1822-20
see page 132

e.g. **Basic Distillation**

- A** Reducing Screw Thread
Adaptor Coupling
Cat. No.: H 904-05
see page 95
- B** Ground Joint Stirrer Bearings
Cat. No.: C 424-13
see page 36
- C** GL Tube Fitting T
Cat. No.: D 540-14
see page 99
- D** Reducing Screw Thread Adaptor Couplings
Cat. No.: H 904-02
see page 95
- E** HT Laboratory Screw Joint
Cat. No.: D 628-74
see page 69
- F** GL Stopcock
Cat. No.: E 684-14
see page 103

The GL Screw Joint System

Component parts:

- A** GL-threaded neck
- B** Sealing ring
- C** Tapered ring
- D** V-ring
- E** Screw cap with internal cone
- F** Tubing or tube
- G** Tapered ring with O-Ring behind PTFE sealing lip (only for screw joints for tubing dia. under 3 mm)

Assembly:

1. Push the screw cap on the tubing/tube
2. Push V-ring, tapered ring and then sealing ring on the tubing/tube
3. Tighten the screw cap on the GL-threaded neck – ready

How to make your order:

A screw joint always consists of two elements

1. Fitting (straight, elbow, T-shape or a GL thread of a glass device)
2. Laboratory screw joint as connection between fitting and tubing/tube

Example 1:

If you want to connect three tubes/ tubings with O.D. 6 mm you will need:

- A** 1 piece of GL tube fitting T GL 14 – Cat. No. D 540-14, see page 99
- B** 3 pieces of HT laboratory screw joints GL 14 for tubing O.D. 6 mm, Cat. No. D 628-74, see page 69

Example 2:

If you want to connect tubing with different O.D. (2 mm and 6 mm) in an angle of 90°, you will need:

- A** 1 piece of GL tube fitting elbow GL 14 – Cat. No. D 539-14, see page 99
- B** 1 piece of HT laboratory screw joints GL 14 for tubing O.D. 6 mm, Cat. No. D 628-74, see page 69
- C** 1 piece of HT laboratory screw joints GL 14 for tubing O.D. 2 mm, Cat. No. D 628-34, see page 69

BOLA Laboratory Screw Joints

In practice, there are many applications where it is necessary to connect hard-walled tubing (e.g. made of PTFE, PFA, FEP) or tubes (e.g. made of glass, metal, plastic) with devices with GL thread (glass thread). BOLA Laboratory Screw Joints are ideal for making these connections.

Components

Each laboratory screw joint consists of a screw cap with a female GL thread and bore as well as three inner parts: v-ring, tapered ring and sealing ring

Assembly and function

Assembly can easily be made by hand:

First, the inner parts are pushed on the tubing. After that, the tubing has to be put into the counterpiece and the screw cap has to be tightened. The screw cap presses the sealing ring and tapered ring tightly on the counterpiece. At the same time, the v-ring is compressed and the tubing is fixed tightly. The connection is absolutely tight and even suitable for vacuum. The laboratory screw joints for GL 14, GL 18 and GL 25 resist pressures of max. 10 bar at room temperature.

Choice

It is easy to choose the suitable laboratory screw joint:

First of all, the outer diameter of the tubing or tube and the size of the GL thread to which the laboratory screw joint shall be connected have to be determined. The size of the GL thread corresponds to the outer diameter of the thread, i.e. a GL 25 thread has an outer diameter of 25 mm. Further assistance for the determination of threads can be found in our technical appendix (page 254).

Also the application is decisive: Will there be temperatures of more than +150°C? If so, the BOLA HT Laboratory Screw Joints (page 69), which also provide a good chemical resistance, are the right choice. Or is it more important to have a very high chemical resistance? Then you have to choose BOLA Laboratory Screw Joints (page 67) made of ETFE (red). These can be used up to temperatures of +150°C.

For big flexibility, all screw caps and inner parts are available separately.

You will find suitable tubing on page 128.

BOLA Laboratory Screw Joints

Material:	Material:	Temperature resistance	Chemical resistance:	Pressure:	Vacuum:
PTFE	ETFE	from -50°C to +150°C	+++ universal	10 bar	suitable

Product description:

Red screw cap made of glass-fibre reinforced ETFE, inner parts consisting of a v-ring (ETFE), a tapered ring and a sealing ring (both PTFE) as well as an o-ring (for tubing diameters under 3 mm, not exposed to the medium). Very good chemical resistance, suitable for temperatures from -50°C to +150°C.

BOLA INNOVATION

One for many

Many common screw joints can only be used for one specific tubing diameter. BOLA Laboratory Screw Joints with exchangeable inner parts can be assembled with many different tubing diameters.

Laboratory Screw Joints

» A quick assembly without any tools is important for us, also for connecting tubes. BOLA Screw Joints offer a high chemical resistance and are absolutely tight if assembled with BOLA tubing. «

Hans Kneuss » Glass Technology

BOLA Multiple Distributors for Bottles

How can liquids be taken out of a bottle or reaction vessel and simultaneously be distributed to several recipients without spillage? How can I pour different liquids into my vessel without loss? These questions were the beginning of BOLA Multiple Distributors for Bottles.

They consist of a screw cap with GL thread and a movable body with GL-threaded necks. These necks allow the connection and insertion of hard-walled tubing (e.g. PTFE, PFA, FEP see page 128) or tubes made of different materials (glass, metal, plastic) by means of BOLA Laboratory Screw Joints (see page 67).

The distributors are not only the basis of a distribution system which can be operated under pressure and vacuum. It is also possible to insert probes or electrodes into the GL-threaded necks and to fix them by means of laboratory screw joints. A possible unevenness of the bottle neck is adjusted by an o-ring behind an elastic sealing lip, and the bottle is closed tightly. The product is only exposed to the body of the distributor. The special feature: the body of the distributor can be turned independently from the screw cap. This means, that the completely assembled distributor can be removed and fixed on another bottle without the risk of disarranging the tubing.

BOLA Flexible Distributors

BOLA BENEFITS

- » with 2 or 3 hose connectors especially for the connection of elastic tubing (e.g. Tygon, Viton, Silicone)
- » hose connectors on the lower side of the distributor for connecting tubing to reach the bottom of the bottle
- » bent hose connectors prevent bends in the tubing
- » distributor suitable for operation under pressure and vacuum
- » the body of the distributor can be turned independently from the screw cap, this means tubing will not be disarranged when the distributor is fixed on another bottle

Completely made of PTFE. With ground joint size 29/32 and two GL-threaded necks. Integrated special nut for easy unlocking of the ground joint. For the connection of tubing or tube made of glass, plastic or metal by means of laboratory screw joints.

FDA conform

For ground joint NS	For tubing O.D. max. mm	Necks GL	Cat. No.:
29/32	2 x 8	2 x 14	D 620-08

Applications:

For bottles or reaction vessels with ground joint. For transferring liquids without contamination. For connection to a liquid source or a pressure or vacuum system.

BOLA Practical Tip

Christian Stöhr » engineering

You have a ground joint, but you don't know exactly its size?

Take our ground joint reducing set which allows bridging different cone and socket sizes.

see page 154

BOLA Ground Joint-GL-Adaptors

Material: PTFE	Material: PPS	Temperature resistance from -50°C to +250°C	Chemical resistance: +++ universal	Vacuum: suitable
--------------------------	-------------------------	---	--	----------------------------

Product description:

Black screw cap made of PPS with GL 45 thread or blue screw cap made of PP with GLS 80 thread, movable insert with ground joint made of PTFE. Transition from a ground joint to a glass thread. The body can be turned independently from the screw cap. The completely assembled adaptor can be removed and fixed on another bottle without the risk of disarranging the tubing. Very good chemical resistance, for working temperatures up to max. +250°C.

NEW

	For bottle thread GLS	Ground joint NS	Cat. No.:
B	80	29/32	D 734-50
	80	45/40	D 734-54

Applications:

Assembly of components with ground joint (condensers, stirrer bearings etc.) on glass bottles or GL-threaded necks.

BOLA Distributors for Reaction Vessels

Suitable for bottles with GLS 80 thread from Duran Group (formerly Schott AG).

Consisting of a screw cap with GLS 80 thread and a movable body with several lateral necks and one central neck.

The GL-threaded necks allow the connection of hard-walled tubing (PTFE, PFA, FEP) or tubes (glass, metal, plastic) by means of BOLA Laboratory Screw Joints (see page 67). It is also possible to insert and fix probes or electrodes. In addition, the connection of elastic tubing can be made by means of BOLA Hose Connectors (see page 108).

The type "Center Neck with Ground Joint" allows the use of a stirrer bearing which assures a central position of a stirrer shaft in the vessel. Other components with ground joint (e.g. condensers, funnels etc.) can also be connected easily.

The type "Center Neck with GL Thread" is supplied with an exchangeable stirrer bearing for the center neck.

A possible unevenness of the bottle neck is adjusted by an o-ring behind an elastic sealing lip, and the bottle is closed tightly. The product is only exposed to the body of the distributor. The special clou: the body of the distributor can be turned independently from the screw cap. This means, that the completely assembled distributor can be removed and fixed on another bottle without the risk of disarranging the tubing.

BOLA Distributors for Reaction Vessels (S)

SUITABLE: page 128
Tubing for all screw joints

BOLA Distributors for Canisters

These distributors are ideal for drawing liquids from canisters and for distributing these liquids to several vessels.

They consist of a screw cap for canister threads (see page 256) and a movable body with three GL-threaded necks. The threaded necks allow the connection of tubing or tubes made of glass, metal, or plastic by means of BOLA Laboratory Screw Joints (see page 67). The distributor can also be integrated into a pressure or vacuum system.

A possible unevenness of the canister thread is adjusted by an o-ring behind an elastic sealing lip, and the canister is closed tightly. The product is only exposed to the body of the distributor.

The special clou: the body of the distributor can be turned independently from the screw cap. This means, that the completely assembled distributor can be removed and fixed on another canister without the risk of disarranging the tubing.

BOLA Multiple Distributors for Barrels

These distributors are ideal for drawing liquids from barrels and for distributing these liquids to several vessels. They consist of a screw cap for barrels with female thread and a movable body with GL-threaded necks. The threaded necks allow the connection of tubing or tubes made of glass, metal, or plastic by means of BOLA Laboratory Screw Joints (see page 67). Liquids can be drawn from the barrel without contamination of the ambient air by leaking vapours. In addition, the distributor can be integrated in a pressure or vacuum system.

The special clou: the body of the distributor can be turned independently from the screw cap. This means, that the completely assembled distributor can be removed and fixed on another barrel without the risk of disarranging the tubing.

For easy determination of the suitable distributor, you can find the dimensions of the barrel threads on page 257.

Applications:

For the connection of e. g. BOLA Multiple Distributors for Bottles with a GL 45 thread for inserting tubing, tubes or probes.

BOLA Screw Caps

BOLA Screw Caps are available as closed caps for closing bottles and vessels with GL thread or as caps with aperture which can for example hold tubes or – in connection with a gasket - be used as septum for sampling. All caps have a handy knurl for easy opening and closing.

They are available for bottle threads GL 14 to GL 45 and are either made of glass-fibre reinforced PTFE, PPS or PBTP. The closed caps are either supplied with an integrated PTFE/silicone gasket or with an integrated PTFE membrane.

The caps which are made of glass-fibre reinforced PTFE have a high chemical resistance and can be used with aggressive products.

PPS offers a high mechanical strength; even caps with small diameters can be closed safely. At the same time, these caps can be used at high temperatures due to a good chemical and thermal resistance.

PBTP caps are an ideal and cheap choice for all applications which do not need high chemical and thermal resistance.

BOLA Screw Caps with Aperture

Product description:

Screw cap with handy knurl, suitable for GL threads, with aperture, made of glass-fibre reinforced PTFE, PPS or PBTP

25	22 x 12,0 x 6,6	11,0 x 13,0	H 977-36

Applications:

As gasket for BOLA Screw Caps with Aperture (Cat. No. H 983/ H 984/ H 995 on page 88). Also suitable for GL caps of company Duran Group (formerly Schott AG).

BOLA BENEFITS

- » suitable for all kinds of probes, tubes or hard-walled tubing
- » can be used with GL threads or ground joints
- » angle and height can be fixed tightly
- » a damage of tube or probe due to collision with the stirrer shaft can be avoided

BOLA Swivelling Screw Fittings with Ground Joint

BESTSELLER

Material: PTFE	Material: PPS	Temperature resistance from -50°C to +250°C	Chemical resistance: +++ universal	Vacuum: suitable
--------------------------	-------------------------	---	--	----------------------------

Product description:

Ground joint body made of PTFE, screw cap made of PPS. Probes, tubes or tubing are firstly inserted through the fitting, then the fitting is put into the ground joint and the inserted element can be fixed in the requested position.

NEW

FDA conform

	Thread of funnel GL	Ground joint NS	Inlet tube (I.D. x O.D.) mm	Cat. No.:
B	32	29/32	20 x 17	D 739-22

Applications:

Positionable insertion for reaction vessels. Adhering or agglutinating of powders is prevented. Liquids can be inserted directly without cooling or adhering at the wall of the vessel. Instead of the glass funnel, a condenser can be mounted at the upper screw cap and provide a direct return into the vessel.

BOLA INNOVATION

GL-Funnel

Helps to insert products into reaction vessels. Available in two versions:

- a) for GL threads
- b) for ground joints

Liquids are inserted directly into the reactor and do not adhere and cool down at the wall.

BOLA Leading-in for Sensors

Material: PTFE	Material: PPS	Temperature resistance from -200°C to +250°C	Chemical resistance: +++ universal
--------------------------	-------------------------	--	--

Product description:

Black screw cap made of PPS with GL 45 thread, movable body made of PTFE with adjusting screw for fixing and sealing sensors. The product is only exposed to PTFE.

FDA conform

	For thread GL	For sensor dia. mm	Cat. No.:
	45	12 (+/-0,5)	D 780-14

Applications:

For contamination-free insertion of sensors into bottles with GL 45 thread.

BOLA GL Tube Fittings

A distribution system consists of tubes or tubing and connection pieces, so-called tube fittings. The BOLA-GL-Fitting-System is a modular system which consists of tube fittings, screw-in fittings, different stopcocks and valves.

All fittings have GL threads so that they can be connected to hard-walled tubing (PTFE, PFA, FEP) or tubes (e.g. glass, metal, plastic) by means of BOLA Laboratory Screw Joints (see page 67).

Together with these BOLA Laboratory Screw Joints (see page 67), the connection is absolutely tight and even suitable for vacuum; the screw joints for GL 14, GL 18 and GL 25 even resist pressures up to max. 10 bar at room temperature.

The system is completed by accessories like quick connectors, dirt traps and GL hose connectors.

BOLA GL Tube Fittings

Material:	Temperature resistance	Chemical resistance:	Pressure:	Vacuum:
PTFE	from -200°C to +250°C	+++ universal	10 bar	suitable

Product description:

Two-way valve with straight bore and two connections with GL thread or three-way valve with L-shaped bore and three connections with GL thread. Ball-shaped stopcock plug for excellent tightness, free-moving stop valve. Suitable for pressure up to max. 12 bar, or for vacuum. Universal chemical resistance, the flowing product is only exposed to PTFE.

FDA conform

Applications:

For distributing liquids or gases. Quick and easy disconnection of flow. Connection of tubing or tubes by means of BOLA Laboratory Screw Joints.

BOLA Vario Couplings

Material: PVDF	Temperature resistance from -40°C to +170°C	Chemical resistance: ++ very good	Pressure: 3 bar	Vacuum: suitable
--------------------------	---	---	---------------------------	----------------------------

Product description:

Two-part coupling made of PVDF for connecting elastic tubing (e.g. Viton®, Tygon®, silicone) to hard-walled tubing made of PTFE, glass or other plastics. Easy and ingenious functioning: the elastic tubing is pushed on a cone and fixed on the coupling by means of a connecting nut. On the other side, the hard-walled tubing is connected as follows:

Flanged PTFE tubing with miniature connectors (e.g. Cat. No. F 740 page 202) is connected to a female thread UNF 1/4" 28 G

Hard-walled tubing up to a maximum O.D. of 10 mm is connected to a GL thread by means of laboratory screw joints (see page 67). Restricted chemical resistance, working temperatures up to max. +170°C.

BOLA Dirt Traps

Material: PTFE	Temperature resistance from -200°C to +250°C	Chemical resistance: +++ universal	Pressure: 10 bar	Vacuum: suitable
--------------------------	--	--	----------------------------	----------------------------

Product description:

With two GL 18 threads for connecting hard-walled tubing (PTFE, PFA, FEP) or tubes with BOLA Laboratory Screw Joints. Lateral connection with plug for easy exchange of filtering membrane (thickness 0,2-3,0 mm) and for cleaning. The flow direction is marked with an arrow. Completely made of PTFE, the flowing product is only exposed to PTFE.

NEW

FDA conform

Connecting thread GL	Dia. of filtering membrane mm	Bore dia. mm	Total height mm	Cat. No.:

The BOLA GL Screw Joint System "EX" – A safe protection against electrostatic charging

By adding conductive particles, these components become electroconductive and can be used for explosive applications. The flowing products can for example be aggressive or combustible liquids or gases.

For function and assembly, please look at the GL Screw Joint System on page 64 which is constructed in the same way.

Electric conductivity

The surface resistance of these components is:
PTFE-EX and PPS-EX: approx. 10^4 Ohm

Flammability

PTFE-EX and PPS-EX are inherently flame-retardant and self-extinguishing. The oxygen index (LOI-value) stands for the oxygen content in the ambient atmosphere in which a material continues burning after inflaming without additional energy source. The oxygen index of PTFE-EX is approx. 95%, the oxygen index of PPS-EX is approx. 50%. Both materials do not burn under normal conditions since the oxygen content of air is 21%.

UV protection

The materials are black and therefore UV-resistant. They can be used for products which react to UV rays.

Chemical resistance

Due to the addition of conductive pigments (e.g. electrographic carbon), the components may be attacked by strongly oxidizing products such as acids, caustic solutions or halogens.

Earthing

The complete system must be earthed professionally. It is advantageous to roughen the surface around the earthing clip to improve the contact (see page 118).

Identification of EX Screw Joints

BOLA components with conductive particles can be identified by their black colour. The caps can be identified by the "EX" mark. An attrition test on paper can also help. The component is rubbed slightly on a white piece of paper. A colouration indicates that the component has conductive particles.

BOLA Laboratory Screw Joints EX

Material: PTFE EX	Material: PPS EX	Temperature resistance from -200°C to +200°C	Chemical resistance: ++ very good	Pressure: 10 bar	Vacuum: suitable	Conductivity: 10^4 Ohm

BOLA Screw Joints for Pressures up to 5 Bar

Components:

- A** Threaded neck of fitting
- B** Tapered ring
- C** V-ring
- D** Nut
- E** Tubing or tube

Assembly:

1. Push the nut on the tubing/tube
2. Push V-ring and then the tapered ring on the tubing/tube
3. Tighten the nut on the threaded neck – ready

What you should know about the screw joint system up to 5 bar

This economic screw joint system was developed especially for tubing made of PTFE, PFA or FEP, but it can also be used with tubes made of glass or steel. Its function is based on compression rings which provide a pressure resistance of up to 5 bar at room temperature. All parts which are exposed to the medium are made of PTFE. Only the nut which is not in contact with the medium is made of glass-fibre reinforced PTFE for better stability. The fittings and nuts have metric threads.

All components of this system have a universal chemical resistance, since the product is only exposed to PTFE.

Page 132:
Flexible Tubing

Page 133:
Conductive Tubing

BOLA Tubing

BOLA Tubing offers many advantages:

- » **Short minimum lengths**
Depending on the tubing dimensions – for details please look at our price-list. Minimum lengths are unfortunately necessary for granting a low price per metre.
- » **No specification of fixed rolls – available per metre**
Free choice of requested length between minimum length and maximum production length
- » **Longer lengths in one piece possible**
For tubing up to O.D. 10 mm, quantities of up to 100 metres in one length are possible without extra charge; quantities of more than 100 metres in one length are only available in particular cases – please ask us.
- » **Whenever possible, your ordered quantity is supplied in one length**
If our inventory or the ordered quantity does not allow another possibility, the tubing is supplied in partial lengths without consultation. Example: 90 m = 60 m + 30 m
- » **Good to handle**
Tubing up to an O.D. of 3 mm and with a minimum length of 30 m is supplied on reels. This prevents bends and twists and makes storage and rolling up easier.
- » **Tailored rolls/reels are available**
Several rolls with the same lengths are available at low extra charges, e.g. 5 rolls of 40 metres or 11 rolls of 22 metres.
- » **Excellent quality at fair prices**
Stricter tolerances than the general industrial standard GKV – perfect interaction with our BOLA Fittings and BOLA Stopcocks

Tolerances of BOLA Tubing – You can count on them.

BOLA Tubing is perfectly suitable for the use with all BOLA Screw Joint Systems. You can be sure that all fittings and screw joints fit together with the tubing. The production of tubing always involves certain tolerances in outer diameter and wall thickness.

We always check our tubing repeatedly on the basis of strict BOLA-internal standards. These standards are stricter than the standards which are currently in the market.

- Nominal O.D.
from 0,4 mm to 3,2 mm
» tolerance of O.D. +/- 0,05 mm
- over 3,3 mm to 10,0 mm
» tolerance of O.D. +/- 0,10 mm
- over 10,1 mm to 16,0 mm
» tolerance of O.D. +/- 0,15 mm
- over 16,1 mm to 22,0 mm
» tolerance of O.D. +/- 0,20 mm
- over 22,1 mm
» tolerance of O.D. +/- 0,25 mm

HELPFUL: page 248
Detailed information about
tubing tolerances

What you should know about the choice of tubing

Incorrectly chosen tubing can endanger the user. Here you can find the most important features in tabular form. The number of "+"-signs stands for the degree of performance of the feature.

Tubing material	PTFE	PFA	FEP
Maximum temperature <small>(at moderate charge)</small>	+260°C	+260°C	+205°C
Minimum temperature <small>(at moderate charge)</small>	-200°C	-270°C	-270°C
Chemical resistance	+++	+++	++(+)
Transparency	+	++(+)	+++
Surface quality	++	+++	+++
Gas proofness <small>(in limit range)</small>	++	+++	+++
Recovery	+	++	++
Costs	+	+++	++

Our tip: PTFE tubing is ideal for the "normal" work in laboratories.

If you need tubing which is absolutely gastight even in limit range of pressure and temperature, you should choose PFA or FEP. PFA only has advantages at temperatures of more than +205°C, but is more expensive than FEP tubing.

We shape and bend ... according to your needs.

FEP and PFA tubing is most suitable for shaping or bending. A special thermal procedure is applied to shape the tubing to the requested form. Please contact us for a free and non-binding quotation.

We connect and assemble ... according to your needs.

We can offer you our "know how" for cutting tubing, assembling fittings (either from our standard range or suitable for your specific system) from single pieces to complete series manufacturing. Please contact us for a free quotation.

Typical range of applications for tubing made of fluoroplastics (PTFE, PFA, FEP)

- » For transport of aggressive products such as acids, lyes, gases and solvents
- » For analysis- or measuring devices of chromatography and laboratory
- » As product lines in miniplant systems
- » As dosing lines for reaction vessels
- » In liquid chromatography; high-purity tubing without additives (e.g. softeners) which could destroy analysis
- » As covering of mechanically operated parts, e.g. bowden wires (due to the low coefficient of friction)
- » As covering of sensors in chemical plants
- » For transport of lacquers, oils, resins and food products
- » As covering of heating elements in galvanic stations and microelectronics
- » Antistatic tubing in explosive applications

BOLA Tubing

Frequently asked questions about customized tubing

» Which tubing dimensions are available?

We can supply tubing with outer diameters between 0,4 mm and 40 mm and wall thicknesses between 0,1 mm and 4 mm.

» What if I only need a small quantity of customized tubing?

Small quantities can be supplied but only at higher cost as a minimum order quantity has to be purchased. Unfortunately it is not possible to indicate exact minimum lengths. In general: the smaller the outer diameter, the bigger the minimum quantity and the smaller the price per metre. Please send us your actual requirement. We will then provide you with the corresponding minimum quantity and price.

» Which tubing materials do you offer?

We offer tubing made of fluoroplastics such as PTFE, PTFE-EX, FEP and PFA. Additionally, we supply tubing made of PEEK.

» What shall I do if I am not sure if the requested tubing is producible?

Normally we know this and can inform you quickly.

» Do you have screw joint systems for every diameter of tubing?

We offer a wide range of screw joints. A screw joint system to your requirements might already exist. If not, custom screw joints can be offered and supplied. Please contact us.

» How do close tolerances affect the price of tubing?

In general, close tolerances increase the price for production because expenses for checking the tubing are higher and there can be more waste of tubing which does not fulfil these close tolerances. It can even occur that a production is not possible if the tolerances are too close – in this case we will contact you to find a solution.

» What is the lead time for tubing?

The lead time depends on many factors such as dimension, quantity, material, tolerances and running length. The typical lead time for customized tubing is between 3 and 6 weeks.

» How do I get a quotation?

Send us your enquiry by fax or e-mail stating all relevant dimensions such as diameter, length, etc. We will do our utmost to get our offer to you as soon as possible. Please do not forget to indicate the required quantity. It is also important to include in your enquiry whether the requested tubing is a one-time or a repeating need.

Cleaning and reuse of tubing

In general, cleaned fluoroplastic tubing should only be reused if the transported product is known and rated with “+” in the chemical resistance chart (page 237).

It is not recommended to reuse the tubing with unknown products and mixtures of chemicals. For all water-soluble substances (e.g. salts, acids, bases etc) you can use water as cleaning agent.

Volatile solvents such as alcohols, esters, ketones, low-boiling hydrocarbons, chlorinated hydrocarbons are given off reversibly by storing under aeration (only if they have not been absorbed by the interior surface of the tubing).

If you are using substances which can only be eliminated by organic solvents or if you are using toxic and dangerous products, the tubing should be disposed appropriately after use. A visual inspection or, in case of unclarity an inspection according to EN 12115, has to be made before reusing cleaned tubing.

You haven't found anything suitable? – No problem

We would be glad to send you a quotation. For quick processing, we need some information:

- » Outer diameter in mm (e.g. 16 mm)
- » Inner diameter in mm (e.g. 12 mm)
- » Which quantity in one length do you need?
- » Which total quantity do you need?
- » Which material shall be used?

Further information – not obligatory, but often making sense.

- » Do you need special tolerances for outer or inner diameter (e.g. \varnothing 10 mm +/- 0,1 mm; this means tubing can vary between 9,9 mm and 10,1 mm)?
- » Shall the tubing be deformable, for example for making flanges?
- » Up to which temperature will the tubing be used?
- » Which pressure shall the tubing resist?
- » Shall the tubing be electroconductive?
- » Shall the tubing be transparent?
- » Shall the tubing have a special surface quality?
- » Do you need certificates? (e.g. test certificates, certificates of compliance or FDA certificates)
- » To which pressure or vacuum at which temperatures is the tubing exposed?
- » Do you need special packaging?
- » Shall the tubing be dyed with a colour? Which colour do you request?
- » Do you need an exceptionally tight bending radius?
- » Does the tubing have to be absolutely gastight?

BESTSELLER

BOLA Flexible Tubing

Material: **PFA** Temperature resistance: **from -270°C to +260°C** Chemical resistance: **+++ universal** Transparency: **transparent** Vacuum: **suitable**

Product description:

Corrugated tubing with circular corrugations around the longitudinal axis and cylindrical tubing ends with a length of 40 mm which can for example be connected directly to fittings, stopcocks or hose connectors. Together with BOLA Laboratory Screw Joints, the connection is absolutely tight and suitable for vacuum.

FDA conform

BOLA Practical Tipp
Uwe Hossfeld » application engineering

How can you calculate the maximum bending radius?
Very easy: Squared outer diameter of tubing divided by wall thickness.

»» PTFE and PFA Tubing

All BOLA Tubing have small tolerance on the outer diameter and the wall thickness. This assures that fittings and screw joints always match.

Inge Fenstad » Chiron AS

¹ Bending radius: minimum bending radius in mm at a room temperature of 23°C

BOLA INNOVATION

Perfect connection

Tubing with industrial standards have a very big range of tolerance. This can lead to problems regarding connection. BOLA Tubing is exactly suited to the strict BOLA standard.

¹ Bending radius: minimum bending radius in mm at a room temperature of 23°C

² Burst pressure: computed value in bar at a room temperature of 23°C. It is recommended to restrict the maximum working pressure to 25% of the burst pressure. For higher temperatures, this value has to be multiplied by the reduction factor shown on page 244. It is the user's responsibility to check if the used tubing fulfills the respective requirements.

¹ Bending radius: minimum bending radius in mm at a room temperature of 23°C

BOLA Heat Shrinkable Tubing

Material: PTFE	Temperature resistance: from -270°C to +260°C	Chemical resistance: +++ universal	Transparency: transparent	Shrink rate: 4:1
--------------------------	---	--	-------------------------------------	----------------------------

Product description:

For protection of probes, cables, electric components etc. against chemical disturbance. The shrink rate of 4:1 means that the inner diameter of the tubing shrinks to approx. 1/4 of the original inner diameter and that the length shrinks to approx. 15%. Good heat transmission due to low wall thickness.

FDA conform

Product advantages:

- » tasteless
- » odourless up to +270°C
- » self-adhesive
- » physiologically safe
- » not ageing
- » good sealing also on uneven surfaces
- » almost universal chemical resistance
- » quick and easy assembly

Applications:

For making customized gaskets "on-site".

BOLA Fluoroplastic Spray

Material:
PTFE

Product description:
Release and anti-blocking agent as well as lubricant for laboratory,

FDA conform

Capacity ml	Cat. No.:
400	H 958-04

Product advantages:

- » dry and greaseless
- » CFC and silicone-free
- » heat resistant up to +260°C
- » non-adhesive and dirt-repellent
- » physiologically safe
- » excellent gliding and separating effects

BOLA Fluorslidepaste

Material: PTFE
Temperature resistance: from -36°C to +260°C
Chemical resistance: +++ universal

Product description:
Extremely stable, synthetic high-temperature paste in resealable tube.

FDA conform

Capacity g	Cat. No.:
56	S 1870-16

Product advantages:

- » exceptionally low friction coefficient
- » extremely long-lasting
- » for temperatures between -36°C and over +260°C
- » resists high mechanical loads
- » not soluble in most solvents
- » non-flammable
- » oxygen-resistant
- » compatible with all common elastomers and plastics
- » chemical resistance against aggressive chemicals or solvents

BOLA Fluoroplastic Grease Tubes

Material: PTFE
Temperature resistance: from -20 °C to +260 °C
Chemical resistance: +++ universal

Product description:
High-performance grease for all kinds of greasing points, fine PTFE particles lower the friction between the surfaces, a special additive system provides extremely high pressure and temperature resistance, also suitable as anticorrosive, does not contain any heavy metals.

NEW

Capacity g	Cat. No.:
100	S 1872-16

Product advantages:

- » very low friction coefficient
- » extremely high pressure and temperature resistance

BOLA Fluoroplastic Sealing Paste

Material: **PTFE** Temperature resistance: **from -240 °C to +260 °C** Chemical resistance: **+++ universal**

Product description:

Odourless and nontoxic paste for all kinds of sealings, non-hardening, eliminates leaks on threads even if high pressure resistance is needed, threaded connections can easily be closed and opened, the threads are prevented from being damaged.

NEW

Capacity g	Cat. No.:
500	S 1874-16

Product advantages:

- » no dropping or flowing during use
- » resealable can including brush

Applications:

Suitable for many bases and acids, any kinds of solvents or gases including hydrogen, ammoniac, chlorine, propane, butane, nitrogen, as well as for air, steam, refrigerants, salt water, and fuels (do not use on liquid or gaseous oxygen and lactic acid).

BOLA Screws with Countersunk Head

Applications:

For extension of surfaces of e. g. distillation apparatus;
as splash guard

BOLA Boiling Stones

Material: PTFE
Temperature resistance: from -200°C to +250°C
Chemical resistance: +++ universal

Product description:
Prevent splashes and production of bubbles during boiling.
Packed in resealable bag.

FDA conform

Grain size mm	Packing unit g	Cat. No.:
4	500	H 972-02
6	500	H 972-04

Product advantages:

- » durable
- » almost universal chemical resistance

Ground Joint Components

No matter if you use sleeves with gripping ring, with ribs or sleeves for spherical ground joints – you always make the right choice since they all feature the unique properties of PTFE.

PRODUCT TIPS

Page 152:
Bellows

Page 150:
Sleeves

Page 151:
Sleeves for spherical ground joints

BOLA Sleeves

BOLA Sleeves

– helpful accessories for many applications

All BOLA sleeves are sealing without any grease and the product will not be contaminated by any greasy residues. They are made for creating gastight, liquid-tight and vacuum tight ground joint connections.

Sealing rings on the outside of the sleeves and a low friction coefficient of PTFE prevent sticking of the ground joints. This reduces the danger of breaking and injury.

The sleeves have an excellent chemical resistance and can be used at working temperatures between -200°C and + 250°C.

Their solid construction (partly with gripping ring) makes them suitable for continued use.

All common joint clamps can still be used.

The sleeves are available for European and American ground joint sizes.

BOLA Sleeves – with sealing rings.

Punctiform sealing on the rings improves both sealing and releasing.

BOLA Sleeves with Gripping Ring

BESTSELLER

Material:	Temperature resistance:	Chemical resistance:	Vacuum:	Feature:
PTFE	from -200 °C to +250°C	+++ universal	suitable	reusable

14 - 60	20	H 981-14

Applications:

For bridging different cone and socket sizes e. g. a NS 14 cone can functionally be placed into a NS 45 socket.

BOLA Glass Flange Metal Adaptors

Material:	Material:	Temperature resistance:	Chemical resistance:	Pressure:	Vacuum:
PTFE	Silicone	from -50°C to +250°C	+++ universal	low	suitable

Product description:

Made of PTFE and silicone, circular PTFE collar facilitates assembly and assures exact placement of the gasket. The elasticity for expansions and contractions is given by a special kind of silicone which is placed behind PTFE sealing lips. Universal chemical resistance since the product is only exposed to PTFE.

NEW

FDA conform

Nominal width	O.D. mm	Bore dia. mm	Seating height mm	Cat. No.:

Seite 163:
Total Immersion Probes

BOLA Temperature Probes and Immersion Probes

Structure and function of BOLA Temperature Probes

All BOLA Temperature Probes are sensors based on platinum resistance changes under temperature influence with a deposited table of values.

The thermocouple itself is located at the end of a PTFE-encapsulated stainless steel tube (material code 1.4571).

The stainless steel tube provides certain rigidity, but can be bent to the requested form by hand, so that the probe can be used at the optimum measuring point.

A connection can either be made by using LEMO® couplings or by connecting the strands of the cable directly to your measuring device. The cable is also encapsulated with PTFE/PFA and connected tightly to the temperature probe.

Advantages of BOLA Temperature Probes

Reduction of response time

The probes have tapered tips which reduces the response time considerably.

Chemical resistance and no metal

The PTFE encapsulation provides an almost universal chemical resistance. All parts which are exposed to the medium do not contain any metal.

High measuring accuracy

Due to the four-wire system, the influence of output and transfer resistance is almost eliminated (aberration approx. 0.002-0.004 %/Ohm). A comparison is normally not needed. The length of the cable can be quite long.

Safe to handle

Due to a collar ring at its end, the probe cannot fall into the medium.

Performance data of BOLA Temperature Probes

Pin configuration of the LEMO® coupling

Temperature probe / PT 100

Temperature range:	-50°C to +250°C
Specification:	DIN EN 60751
Type:	Platinum temperature sensor
Class:	A
Tolerance:	0,15 + (0,002 x (t))
Typical aberrations:	at 0°C: +/- 0,15°C at 100°C: +/- 0,35°C

Pin configuration of the Temperature Probe K

Temperature Probe K

Temperature range:	-0°C to +300°C
Specification:	IEC60584.3:2007
Type:	Typ K Thermoelement
Tolerance:	+/- 0,15° C

We produce temperature probes according to your indications

Do you need a different temperature probe?
No problem – we can quote for your special requirements.

Coating custom temperature probes and thermometers

We can coat your temperature probes or thermometers with a PTFE heat shrinkable tubing so that they have the chemical resistance of PTFE. Even if the probes or thermometers break, there is no risk of contamination due to the PTFE coating.

Because of the thin coating, the probe or thermometer has slower response behaviour.

For coating, your probe/thermometer has to resist a short-time temperature of minimum +250°C.

Please contact us!

HELPFUL: page 244
Determination of response times of temperature probes

Response times of BOLA Temperature Probes

Due to the properties of PTFE, the response times of PTFE-encapsulated temperature probes are longer than the response times of glass or metal probes. We have indicated all corresponding T 50 and T 90 values of our temperature probes.

Plugs and sockets

Our temperature probes PT100 are normally supplied with sockets type LEMO® size 1. Should you need a different LEMO® size or a plug instead of a socket, we can offer corresponding adaptors.

We can also supply temperature probes with your specific plug or socket. You can find below the most important dimensions for determination of LEMO® plugs and sockets.

Easy identification of plug and socket size!

You can find out your plug or socket size as follows:

Plug Lemo Size 0
O.D. 7 mm

Plug Lemo Size 1
O.D. 9 mm

Socket Lemo size 0
O.D. 9 mm

Socket Lemo size 1
O.D. 12 mm

BOLA Hydrolyzing and Digestion Vessels for Microwave Ovens

Microwave ovens are often used for making quick and easy digestions. The energy of a microwave oven penetrates the material of the vessel almost without any loss. It only heats the liquid within a few seconds over the boiling point.

BOLA Digestion Vessels are made of TFM, a modified PTFE with thermoplastic parts for a homogenous, non-porous surface which avoids contaminations and memory effects.

They are available in 2 versions:

- » Cat. No. A 240-...: consisting of basic vessel, screw cover and mounted sealing and rupture membrane.
- » Cat. No. A 250-...: consisting of basic vessel, screw cover, mounted sealing and rupture membrane and exchangeable liner which allows a more precise weighted sample and different digestions with only one basic vessel.

As soon as the pressure exceeds the maximum limit, the rupture membrane bursts and the released liquid will be drained through an optional tubing (O.D. 6,35 mm / 1/4") into a separately available collecting vessel (Cat. No. A 131-..., see page 184).

Material: PTFE	Material: TFM	Chemical resistance: +++ universal
--------------------------	-------------------------	--

BOLA Digestion Vessels

Product description:

Dimensionally stable basic vessel and screw cover made of TFM, homogenous, non-porous surface. 1 piece of sealing and rupture membranes already mounted, 10 pieces of replacement membranes included in delivery. For samples of up to max. 0,5 g.

BOLA Flat Flange Distillation Apparatus

Product description:

Suitable for the distillation of strong alkaline or acid products as well as very aggressive solvents when the resistance of other materials, e.g. glass, is not sufficient. All parts exposed to the medium are either made completely of PTFE/PFA or, like the thermometers, jacketed with PTFE. The distillate in the Liebig Condenser is conducted to the collecting vessel through a PFA pipe.

For heating, we recommend to either use a thermostat or an electric heating mantle. A temperature of +200°C should not be exceeded.

As alternative to the reaction vessel made of PTFE with round bottom, you can also use the reaction vessel made of PFA with flat bottom. It is translucent, non-porous and can be used with a hotplate magnetic stirrer and a PTFE-encapsulated magnetic stirring bar for stirring.

The Safe-Lab principle:

For security reasons, our distillation apparatus are equipped with the patented Safe-Lab system. This system allows a tight and safe connection as well as an easy disconnection of cone and socket. A special nut which is held on an external thread above the cone holds and locks the socket. For disconnection, this special nut has to be turned clockwise. The power is enforced by the thread pitch and is transferred axially to the socket. The ground joint is released.

Tubing with mini fittings

Page 201:
Distributors with UNF
Threads

BOLA HPLC Distributors for Bottles

They consist of a screw cap made of glass-fibre reinforced PP with GL 45 thread and a movable body with connection ports. All necessary screw joints and gaskets for connecting hard-walled tubing (e.g. PTFE, FEP or PFA, see page 128) up to a maximum diameter of 6 mm are included in delivery and make the HPLC distributors usable immediately.

Tubing up to a diameter of 4 mm can be passed and fixed absolutely tightly at the requested immersion depth.

The distributors with stopcocks allow closing unused ports; the FEP stopcock plug provides a universal chemical resistance.

Because of the stopcocks, it is not possible to pass the tubing. A connection to the bottom of the bottle can still be made by pushing tubing with O.D. of 5 mm or I.D. of 6 mm in or on the port on the lower side of the distributor.

A possible unevenness of the bottle neck is adjusted by an o-ring behind an elastic sealing lip, and the bottle is closed tightly. The product is only exposed to the body of the distributor.

The special feature: the body of the distributor can be turned independently from the screw cap. This means, that the completely assembled distributor can be removed and fixed on another bottle without the risk of disarranging the tubing.

Luer cone	3,5	D 610-50

Applications:

For sterile aeration by means of syringe filters.

BOLA Screw Joints for HPLC

What you should know about the BOLA HPLC Screw Joint System

This system is based on flanged tubing and UNF 1/4" 28 G threads. These threads have their origin in the United States and are mainly used in chromatography/HPLC. "1/4" stands for the outer diameter of 6,35 mm. "28 G" stands for 28 thread pitches at the length of one inch (25,4 mm).

Following tubing sizes are mainly used in HPLC:

- » 1/8" (O.D. approx. 3,2 mm x I.D. approx. 1,6 mm)
- » 1/16" (O.D. approx. 1,6 mm x I.D. approx. 0,8 mm)

The screw joint itself consists of a screw (BOLA Tube End Fitting) with washer and flanged tubing. It resists pressures up to 30 bar.

The metal-free washer provides ideal contact pressure of the flanged tubing and prevents small folds during the last phase of tightening the tube end fitting.

The flowing product is only exposed to PTFE – the screw joint has a universal chemical resistance and is absolutely clean.

The PTFE tubing to be flanged must be made of a special type of PTFE. Our tubing fulfils this requirement (see page 210). Besides PTFE tubing, there can also be used FEP and PFA tubing (both gastight and transparent).

The different colours of the tube end fittings (see page 208) can be used for distinction.

How to flange PTFE tubing

- » cut tubing square
- » clamp tubing by means of tubing holder – overhang approx. 3-5 mm
- » press tubing on flanging tip and preform it
- » press preformed tubing end on cooling plate
- » push fitting and washer on the tubing and tighten the fitting
- » ready

Of course we also have flanged tubing with assembled tube end fittings in different lengths in our standard range (see page 202).

We can also manufacture tubing according to your requirements.

Don't confuse UNF 1/4" 28 and M6 threads!

Besides the common UNF threads, there are also M6 threads circulating. These threads are very similar to the UNF thread, but please only use UNF tube end fittings to avoid damage or leakage of your fittings. You can find universal couplings for a transition from UNF 1/4" 28G to M6 on page 206.

BOLA Distributors for Bottles

BESTSELLER

Material: PTFE
 Temperature resistance: from -50°C to +200°C
 Chemical resistance: +++ universal

Product description:

Black screw cap made of PPS for bottle thread GL 45. Without stopcocks: body made of PTFE with 2 or 4 ports with female thread UNF 1/4" 28 G on upper and lower sides. With stopcocks: body made of PTFE with 2 or 3 ports with female thread UNF 1/4" 28 G on upper and lower sides and stopcock made of FEP for each port. A possible unevenness of the bottle neck is adjusted by an o-ring behind an elastic sealing lip, and the bottle is closed tightly. The product is only exposed to the body of the distributor. The body of the distributor can be turned independently from the screw cap. This means, that the assembled distributor can be removed completely and fixed on another bottle without the risk of disarranging the tubing. Very good chemical resistance, for working temperatures up to +200°C. Suitable flanged tubing can be found on page 202.

BOLA Miniature Couplings

Material: PTFE Material: POM Temperature resistance: from -200°C to +200°C Chemical resistance: +++ universal

Product description:

Three types of couplings available: straight type made of PTFE or POM with higher mechanical strength, "T" type with three connections or "cross" type with four connections, all made of PTFE. The tubing is connected by means of tube end fittings (see page 202) to a female thread UNF 1/4" 28 G.

FDA conform

BOLA Miniature Manifold Blocks

Material: PTFE Temperature resistance: from -10°C to +120°C Chemical resistance: +++ universal Pressure: 8 bar

Product description:

Block made of PTFE with one inlet and four outlets with female thread UNF 1/4" 28 G. Also available with four stopcocks with stopcock plugs made of FEP for easy interruption and control of flow. Suitable flanged tubing can be found on page 202.

FDA conform

BOLA Miniature Pressure Relief Valves

Material: PTFE Temperature resistance: from -20°C to +150°C Chemical resistance: +++ universal Pressure: 5 bar

Product description:

Body made of PTFE with two connections with female thread UNF 1/4" 28 G. Valve made of PPS with set screw and lock nut for adjusting and fixing pressure between 0,1 and 5 bar (factory setting 1,5 bar). Suitable flanged tubing can be found on page 202.

NEW

FDA conform

	For tubing I.D. x O.D. mm	O.D. mm	Total height mm	Cat. No.:
	(1/32" x 1/16") 0,8 x 1,6	32	50	F 738-08

	For tubing I.D. x O.D. mm	O.D. mm	Total height mm	Cat. No.:
	(1/16" x 1/8") 1,6 x 3,2	32	50	F 738-16

Product advantages:

- » low dead volume
- » flow direction is marked by an arrow
- » two holes for panel mounting
- » universal chemical resistance, the flowing product is only exposed to PTFE

Applications:

Pressure control valve with adjustable opening pressure. For preventing pressure drop during filling.

BOLA Universal Couplings

Material: **PTFE** Temperature resistance: **from -200°C to +250°C** Chemical resistance: **+++ universal**

Product description:

Coupling made of PTFE for transition from M6 thread to UNF 1/4" 28 G thread. The M6 thread is marked by a groove.

FDA conform

	Female thread	Female thread	Bore dia. mm	Cat. No.:
A	M 6	UNF 1/4" 28 G	0,8	F 770-08

	Male thread	Male thread	Bore dia. mm	Cat. No.:

BOLA Miniature Luer-Lock Connectors

Material: PTFE
 Temperature resistance: from -200 °C to +250 °C
 Chemical resistance: +++ universal

Product description:

Connector made of PTFE for transition from Luer Lock connection to female thread UNF 1/4" 28G.

The inner cone of the Luer-Lock connection provides good sealing, the additional thread (either male or female) prevents accidental loosening.

The tubing is connected by means of tube end fittings (see page 202) to a female thread UNF 1/4" 28G.

NEW

FDA conform

	For tubing I.D. x O.D. mm	Female thread	Luer Lock	Bore dia. mm	Cat.No.:
A	(1/32" x 1/16") 0,8 x 1,6	UNF 1/4" 28 G	female	0,8	F 718-02
B	(1/32" x 1/16") 0,8 x 1,6	UNF 1/4" 28 G	male	0,8	F 718-06
	For tubing I.D. x O.D. mm	Female thread	Luer Lock	Bore dia. mm	Cat.No.:

B	(1/16" x 1/8") 1,6 x 3,2	UNF 1/4" 28 G	male	1,6	F 718-08

Applications:

Connection of componets with Luer Lock such as syringes or cannulas to a tubing system.

BOLA UNF-Adaptors for-Prominent® Pumps

Material: PTFE
 Temperature resistance: from -200°C to +250°C
 Chemical resistance: +++ universal
 Pressure: 10 bar

Product description:

Adaptor made of glass-fibre reinforced PTFE, transition from pump thread M20 x 1,5 to female thread UNF 1/4" 28 G. Pressure resistant connection (max. 10 bar). The tubing is connected by means of tube end fittings to a female thread UNF 1/4" 28G. Universal chemical resistance, the product is only exposed to PTFE.

BOLA Thermoelectric Flanging Tools

Product description:

For making flanges at the ends of plastic tubing (e.g. PTFE, PFA or FEP see page 210)

Following sets are available:	For tubing I.D. mm	Version	Cat. No.:
1 x Basic flanging tool 230V/50 Hz 1 x Exchangeable flanging tip for flanging tubing I.D. 0,8 mm 1 x Tubing holder for tubing O.D. 1,6 mm (1/16") and 3,2 mm (1/8")	0,8	230 V 50 HZ	F 701-02
1 x Basic flanging tool 230V/50 Hz 1 x Exchangeable flanging tip for flanging tubing I.D. 1,6 mm 1 x Tubing holder for tubing O.D. 1,6 mm (1/16") and 3,2 mm (1/8")	1,6	230 V 50 HZ	F 701-04
1 x Basic flanging tool 150V/60 Hz 1 x Exchangeable flanging tip for flanging tubing I.D. 0,8 mm 1 x Tubing holder for tubing O.D. 1,6 mm (1/16") and 3,2 mm (1/8")	0,8	115 V 60 HZ	F 708-02
1 x Basic flanging tool 150V/60 Hz 1 x Exchangeable flanging tip for flanging tubing I.D. 1,6 mm 1 x Tubing holder for tubing O.D. 1,6 mm (1/16") and 3,2 mm (1/8")	1,6	115 V 60 HZ	F 708-04

BOLA Tubing Holders

Product description:

For tubing with O.D. 1,6 mm (1/16") and 3,2 mm (1/8").

For tubing O.D. mm			Cat. No.:
(1/16") 1,6 and (1/8") 3,2			F 706-06

Product advantages:

- » safe fixing of the tubing during the flanging procedure
- » easy assembly and handling
- » injuries due to the hot flanging tips are avoided

BOLA Flanging Tips

Product description:

For flanging different inner diameters of tubing, suitable for BOLA Thermo-electric Flanging Tools see above.

For tubing I.D. mm			Cat. No.:
0,5			F 701-50
(1/32") 0,8			F 701-52
(1/16") 1,6			F 701-54
2,4			F 701-56

BOLA Standard Construction Kits

Product description:

For making flanges at the ends of plastic tubing (e.g. PTFE, PFA or FEP see page 210)

Following sets are available	For tubing I.D. mm	Version	Cat. No.:
1 x BOLA Thermo-electric Flanging Tool with exchangeable flanging tip for tubing I.D. 0,8 mm 1 x BOLA Tube End Fitting Set 5 x BOLA Plugs 10 x BOLA Miniature Couplings (straight) 2 x Miniature Couplings (T) 1 x BOLA Miniature Coupling (cross) 1 x 10 metres of PTFE tubing (I.D. 0,8 mm, O.D. 1,6 mm)	0,8	230 V 50 HZ	F 700-02

BOLA Filtration

Information about pore sizes – what do these indications mean?

Class	Indication	Pore size in μm
00	P 500	250 - 500 *
0	P 250	160 - 250 *
1	P 160	100 - 160 *
2	P 100	40 - 100
3	P 40	16 - 40
4	P 16	10 - 16
5	P 1,6	1 - 1,6

* not feasible with PTFE at the moment

What you should know about porous PTFE.

For the production of porous rods, tubes and tiles, PTFE particles are melted together.

The pore size can be determined both by the selection of the PTFE granules and the process parameters.

Due to the non-adhesive surface, filtering devices made of fluoroplastics (PTFE/PFA) are easy to clean and have a long durability.

Microporous PTFE has the same unique properties like "normal" PTFE:

- » non-adhesive / dirt-repellent
- » hydrophobic / water-repellent
- » non-wettable
- » no release of trace elements in the filtrate (no plasticisers)
- » almost universal chemical resistance to acids, bases and solvents
- » excellent temperature resistance between -200°C and $+260^{\circ}\text{C}$ (temporarily even $+300^{\circ}\text{C}$)
- » autoclavable

Typical applications – often asked.

Pore size	Application
50 μm	Filtration of coarse particles, distribution of gas in liquids
5 μm	Filtration of medium-sized particles, laboratory filtration, valve for packings (gas permeable, leak proof)
1 μm	Filtration of aqueous solvents, elimination of particles
0,45 μm	Prefiltration of aqueous solvents, HPLC solvents, protein solvents and alcohols, sterile filtration of air or other gases
0,2 μm	Ultracleaning of organic solvents and alcohols, sterile filtration of air or other gases
0,05 μm	Ultracleaning of solvents or gases (virus)

BOLA Scrubber Adaptors for Bottles

Material: PTFE Temperature resistance: from -200°C to +250°C Chemical resistance: +++ universal Vacuum: suitable autoclave: 121°

Product description:

Consisting of PTFE body with connecting nut and two lateral GL 18 threaded necks, a FEP inlet tube with a length of 300 mm and a gas distributor with finest bores. Easy in- and outlet of gas by means of hard-walled tubing (e.g. PTFE) which can be connected to the threaded necks by means of BOLA Laboratory Screw Joints (page 67). Elastic tubing can be connected by means of hose connectors (page 108). Inlet tube can be shortened individually.

The special feature: the body of the adaptor can be turned independently from the connecting nut. This means, that the completely assembled adaptor can be removed and fixed on another bottle without the risk of disarranging the tubing. Suitable for bottles of company Duran Group (formerly Schott, Mainz) with GL 45 and GLS 80 thread and a volume between 100 and 5000 ml.

FDA conform

Page 228:
Battery-operated Pump

BOLA BENEFITS

- » powerful – pumping capacity of up to 6 litres per minute free flowing
- » compact construction
- » battery operated and therefore usable anywhere
- » easy handling
- » very light weight (only 500 g including batteries)
- » low-risk pumping
- » also suitable for narrow mouth vessels with ground joint 29/32 or thread GL 45, carboys or barrels

Material: **PP** Temperature resistance: **from +5°C to +60°C** Chemical resistance: **++ very good**

Product description:
 Made of polypropylene, PTFE, Hastelloy®, driven by two commercial 1,5 V batteries (we recommend the use of rechargeable batteries)

FDA conform

Length of suction pipe mm	Dia. of suction pipe mm	Cat. No.:
400	25	G 870-01
600	25	G 870-11

Applications:
 For pumping low viscous liquids (e.g. acids, bases etc.)

« »
 Special Request?
 +49 (0) 93 46-92 86-0

For ground joint 29/32

For thread GL 45

BOLA BENEFITS

- » compact construction
- » usable anywhere (no power or air supply needed)
- » easy handling
- » quick and low-risk pumping of ultrapure liquids
- » volume per stroke 50 ml
- » for tubing O.D. 6 mm, PTFE tubing (length 2 m) included in delivery

BESTSELLER

BOLA Sampling Pump

Material: PTFE Material: PP Temperature resistance: from -10°C to +90°C Chemical resistance: ++ very good

Product description:

Made of polypropylene and PTFE. A pull on the ball handle produces a slight vacuum in the sampling bottle. Due to this vacuum, the sample is sucked into the sampling bottle. Both glass bottles and plastic bottles with a GL 45 thread can be used as sampling bottles. The pump provides universal chemical resistance since the sample is only exposed to PTFE.

FDA conform

Thread for connection GL	For bottles with a capacity of ml	suction lift of water max. m	Cat. No.:
18	100 - 2.000	4,5	A 124-16

Applications:

For pumping liquids from sources that are not easily accessible; also suitable for liquids with a high viscosity, e.g. oils

SUITABLE: page 132
Tubing for all screw joints

BOLA Micro Magnet for Glass Pumps

Material: PTFE Temperature resistance: from +0°C to +150°C Chemical resistance: +++ universal Pressure: 1 bar

Product description:

Made of PTFE, the magnet can be adjusted in height by means of the integrated screw. The strong magnet provides good power transmission.

FDA conform

Suitable for DN	Bore dia. mm	O.D. mm	Height mm	Cat. No.:
50	6	36	29	G 876-14

Applications:

Suitable for all common laboratory glass pumps, e.g. from company NORMAG®

We build your pump!

Besides the pumps shown on these pages we also construct and produce custom-made pumps. Those pumps are used in a multitude of appliances and plants.

Membrane pump with PTFE bellow piston, compressed-air drive.

Metering unit with inspection glass, sensor mount and compressed-air driven PTFE bellow piston.

Technical Information

Materials – Chemical resistance – Information about fluoroplastics, stirrer shafts and tubing – Determination of threads – Conversion tables

BOLA Materials

Fluoroplastics

Belong to the family of thermoplastics. The higher the fluorine content, the better the thermal and chemical capacity of fluoropolymers.

Unique properties are:

- » universal chemical resistance
- » high thermal load capacity (-200 °C up to +260 °C)
- » resistance to all sterilisation temperatures
- » non-flammable
- » resistant to environmental changes (weather, light)
- » non-adhesive
- » ultra-low friction coefficient
- » unbreakable
- » physiologically safe
- » inert, no taste, odourless
- » UV-resistant

PTFE – Polytetrafluoroethylene

Already discovered in 1938 by research-chemists of DuPont (USA) it was not introduced or marketed until 1946. A partly crystalline fluoroplastic that belongs to the family of thermoplastics (but not suitable for injection moulding).

The remarkable chemical and thermal resistance results from the linkage force between carbon atoms and fluorine atoms and from the nearly complete shielding of the carbon chain by fluorine atoms.

PTFE has a thermal resistance of -260 °C up to +300 °C (for example no brittleness in boiling helium at -269 °C). This temperature range is reached by no other commercial plastic material.

Permanent temperature resistance depends on the load. This means that PTFE can be used from -200 °C to +260 °C at moderate mechanical load. PTFE labware has a white appearance, a non-adhesive surface and excellent slip characteristics. Its fabrication is done by isostatic pressing processes or by machining of extruded semi-finished PTFE material.

Trade name

Teflon®
by DuPont
Hostaflon®
by Dyneon
Fluon®
by ICI Fibres

PTFE – TFM

A further development of the classic Polytetrafluoroethylene (PTFE), with additional modifier Perfluorpropylvinylether.

Due to a five times lower molecular weight and a more homogeneous crystal structure, the single particles merge a nearly pore-free polymer structure. Compared to PTFE, the tightness as well as the barrier effect at the same wall thickness are doubled. This is particularly advantageous at high working temperatures. PTFE-TFM has a universal chemical resistance. Sticking of any contaminations is prevented by an extreme smooth surface. Special methods allow a simple and safe heat seal. This material is ideal for e. g. digestion vessels or gaskets.

FEP – Tetrafluoroethylene-Perfluoropropylene

A molten copolymer of tetrafluoroethylene and perfluoropropylene with a high-molecular, partly crystalline structure which was introduced on the market in 1960.

Its mechanical and chemical properties are comparable with those of PTFE, however, the upper limit of the permanent working temperature is lower than that of PTFE (max. +205 °C).

FEP is a typical thermoplastic material which can be treated and machined by using established methods, although its high viscosity limits the speed of operation. FEP labware is translucent to transparent and non-porous.

**Trade name**

Teflon®
by DuPont
Neoflon®
by Daikin

PFA – Perfluoroalkoxy

Fluorinated hydrocarbon with a high-molecular, partly crystalline structure.

Compared to PTFE it has additional side chains consisting of perfluorated alkoxy groups. The chemical and thermal properties of this thermoplastic fluoropolymer are equal to those of PTFE.

PFA labware is translucent to transparent, non-porous and particularly useful in high-purity work.

**Trade name**

Teflon®
by DuPont
Hostafion®
by Dyneon

ETFE – Ethylene-Tetrafluoroethylene

A modified copolymer of ethylene-tetrafluoroethylene. Unlike the homopolymer PTFE which can be treated only by means of pressing or sintering, ETFE can be thermoplastic processed. I. e. this plastic can be injection moulded with appropriate machines.

In laboratories, this material is mainly used for items reinforced with glass fibre such as screw caps or screw joints.

**Trade name**

Tefzel®
by DuPont
Hostafion ET®
by Dyneon

PVDF – Polyvinylidene Fluoride

A fluoroplastic that can be machined or thermoplastic processed.

Characterised by a good to excellent chemical resistance. Compared with PTFE, it is much harder and more rigid, but its functional temperature range is lower. Its advantages over other fluoroplastics are its easy processing, the high mechanical values and the low specific weight.

Therefore it is used in many applications.

**Trade name**

Solef®
by Solvay
Dyflor®
by Dynamit

PVF – Polyvinylfluoride

Containing fluorine, it displays a stronger chemical linkage than common polymers and thus a better inherent stability. It shows its unique properties when used at temperatures ranging from -70 °C to +110 °C, whereas temperatures of up to max. +200 °C are withstood. Polyvinylfluoride does not contain any softener, is resistant to fading and can easily be cleaned due to its dirt-repelling surface. In particular, foils, films and bags for gas analysis are made of PVF.

**Trade name**

Tedlar®
by DuPont

BOLA Materials

Technical Plastics

Mainly used for high working temperature ranges.
Their best known advantages are:

- » low abrasion
- » no corrosion
- » excellent gliding properties
- » high rigidity
- » good chemical resistance
- » dimensional accuracy
- » high thermal resistance

PPS – Polyphenylsiloxan

New technical high-performance plastic. This macromolecule consists of phenylene rings and one S-atom which provide a good chemical resistance even at high working temperatures. PPS is particularly suitable for the production of moulded pieces which are exposed to high mechanical and thermal stresses. Injection moulding is the most common processing technology for this material, in addition, single components can be made of semi-finished products by cutting. Special glass-fibre reinforced compounds offer an improved rigidity, sturdiness and dimensional stability under heat compared to non-reinforced compounds.

Polymer Corp.

PEEK – Polyetheretherketone

Partly crystalline thermoplastic that withstands high temperatures. Due to its unique properties, PEEK is mainly used for high-value and highly stressable components. The high upper working temperature (+250 °C), the good chemical stability and resistance to hydrolysis as well as the high mechanical values of this material will allow PEEK to become the material of the future. PEEK components are commonly used as HPLC fittings, screw joints or as tubing. Its natural colour is brown, its price is considerably higher than that of PTFE or PFA.

Trade name
Victrex®
by Victrex
Hostatec®
by Hoechst

PP – Polypropylene

A polymer of ethylene with isotactic arrangement of methyl groups. It does not belong to the family of fluoroplastics. PP can be autoclaved (at +121 °C) and is distinguished by good mechanical and chemical properties almost up to its softening point. PP labware is unbreakable and an economical alternative with, however, restricted chemical and thermal resistance.

Trade name
Norolen®
by BASF
Hostalen®
by BASF

PA – Polyamides

Condensation polymers obtained either from amino acids respectively from their lactams (e. g. caproic lactam) or diamine and dicarboxylic acid (e. g. adipic acid and hexamethylene-diamine). In general, polyamides are defined according to the number of carbon atoms of their monomers, e. g. PA 6 = polycarbonic lactam or PA 12 = polylauric lactam. PA 6 is the most commonly used polyamide. All polyamides are characterised by high strength and scuff resistance. The application range varies from simple turned parts such as screws or nuts to plain bearings or toothed wheels.

Ultramid®
by BASF
Durethan®
by Bayer
Grilon®
by Ems Chemie

PS – Polystyrene

A polymerisation product of styrene. Polystyrene is one of the most commonly used plastic materials. For many years it has been processed by injection moulding, extruding or blowing. Because of its structure, it is transparent, hard and brittle. A disadvantage is its low thermal and chemical resistance.

Trade name

Lacqrene®
by ATO
Vestyron®
by Innovene
Edistir®
by Montedison

PMMA – Polymethylmethacrylate

An acrylic resin based on methyl methacrylate. It has become generally known under the trade name Plexiglas®. On the one hand, PMMA is approx. 60 times more elastic than window glass but on the other hand it is approx. 10 times more permeable than silicate glass. Of course, the hardness of its surface does not correspond to that of glass but compared with other materials it can easily be polished to high brilliance. As to weight, Polymethylmethacrylate is much more lightweight than normal window glass.

Trade name

Plexiglas®
by Röhm
Perspex®
by ICI
Oroglas®
by Rohm and Haas

Elastomers

Their main characteristic is their elasticity: Elastomers can easily be stretched and bent and return to their original shape and size after being released. These synthetic materials are most commonly used for o-rings, flat gaskets or resilient elements.

NBR – Acrylonitrile-Butadiene-Caoutchouc

Elastomer on the base of acrylonitrile-butadiene-caoutchouc which is mainly used as budget-priced sealing material (e. g. O-rings for stop-cocks). This material has a good resistance to mineral oils and fats as well as to HFA, HFB and HFC-hydraulic fluids. It has a very good elasticity. PERBUNAN® (its well-known trade name of BAYER AG) is not resistant to brake fluids on the basis of glycol, HFD liquids, aromatic compounds (e. g. Benzole), ester, keton and amines as well as in concentrated acids and caustic solutions. Due to its restricted chemical resistance, PERBUNAN® is not the ideal material for chemistry.

FPM – Fluorocaoutchouc

Elastomer on the base of fluorocaoutchouc, more familiar as VITON® (DuPont). Many O-rings, lip seals and sleeves are made of FPM. It has a very good resistance to heat, chemicals, weather and ozone. Furthermore, it is resistant to sulphurated mineral oils and fats and to hardly inflammable HFD liquids (basis phosphor ester or chlorinated hydrocarbon). It is not resistant to anhydrous ammonia, caustic soda, potassium, ketones, ether, dioxane, as well as some amines and organic acids. For BOLA products, FPM is mainly used as sealing material, mostly protected from the medium by a PTFE sealing lip.

EPDM

EPDM 3 is an elastomer on the base of ethylene-propylene-diene-caoutchouc which is mostly used for gaskets and O-rings. The main applications are in the area of hot water, steam and suds. It is not resistant to hydraulic fluids on the base of mineral oil but it is weather-proof, non-ageing and resistant to ozone. At BOLA, EPDM O-rings are mainly used for applications where VITON® O-rings are not sufficient.

FFKM – Perfluoro-Caoutchouc

An elastic sealing material with natural recovery and good accommodation to the sealing surfaces and a chemical resistance comparable with PTFE. FFKM O-rings have a very high chemical and thermal resistance. Such seals can withstand virtually all kinds of chemicals and can be used at long duration conditions with temperatures up to +260 °C. Perfluoro-caoutchouc is better known under the trade names KALREZ® by DuPont respectively CHEMRAZ® by Greene Tweed.

Definitions and abbreviations:

- + **Excellent chemical resistance** – continuous exposure for more than 30 days does not cause any damage or only minor damages.
- o **Limited chemical resistance** – depending on the plastic material, a continuous exposure for a longer period of time may cause damages such as cracks, decrease of mechanical strength, discoloration, etc.
- **Poor resistance** – the plastic material can be deformed or destroyed.

Definitions and abbreviations:

- + **Excellent chemical resistance** – continuous exposure for more than 30 days does not cause any damage or only minor damages.
- o **Limited chemical resistance** – depending on the plastic material, a continuous exposure for a longer period of time may cause damages such as cracks, decrease of mechanical strength, discoloration, etc.
- **Poor resistance** – the plastic material can be deformed or destroyed.

Definitions and abbreviations:

- + **Excellent chemical resistance** – continuous exposure for more than 30 days does not cause any damage or only minor damages.
- o **Limited chemical resistance** – depending on the plastic material, a continuous exposure for a longer period of time may cause damages such as cracks, decrease of mechanical strength, discoloration, etc.
- **Poor resistance** – the plastic material can be deformed or destroyed.

Definitions and abbreviations:

- + **Excellent chemical resistance** – continuous exposure for more than 30 days does not cause any damage or only minor damages.
- o **Limited chemical resistance** – depending on the plastic material, a continuous exposure for a longer period of time may cause damages such as cracks, decrease of mechanical strength, discoloration, etc.
- **Poor resistance** – the plastic material can be deformed or destroyed.

All fluoroplastics, PTFE, PFA and FEP have a smooth, non-wetting surface and can usually be cleaned without any problems. Abrasive scouring agents might damage the surface and result in a milkiness of the vessels – especially those made of PFA and FEP. You may use all neutral detergents (pH 7). For a stronger contamination we recommend to use an alkaline detergent up to pH 12. Clean or dry vessels in a laboratory washing machine only when they are completely opened.

Cleaning and re-utilisation of tubing

In principle, fluoroplastic tubing shall only be reused provided the material which shall be conveyed is known and rated with + in the chemical resistance chart. If the first conveyed products or components of chemical compounds are unknown, the reuse of tubing cannot be recommended. Appropriate detergents are all water-soluble substances (such as salts, acids, lyes, etc.). Volatile solvents such as alcohols, ester, ketones, low-boiling hydrocarbons, chlorinated hydrocarbon, etc. will be reversibly dispended during aerated storage provided the substance was not absorbed by the inner layer of the tubing. After use with toxic or hazardous materials as well as with substances which only can be removed by using organic solvents, the tubing should be professionally disposed. Prior to reuse, cleaned tubing has to go through a visual inspection, respectively in case of doubt an inspection as per EN 12115 has to be made.

Autoclaving at +121 °C

Vessels made of PTFE, PFA or FEP can be autoclaved or sterilised at +121 °C. This can for example be made in the steam space or in dry conditions at +160 °C. All vessels with screw covers or stoppers have to be open while being autoclaved. Autoclaving of closed vessels will result in their deformation or destruction.

Cleaning for trace analysis

To prevent contamination with cations or anions in trace analysis, the vessels should first be filled with a 1NHCL and HNO₃ solution. This solution should be allowed to stand for a maximum of 6 hours at room temperature. The vessels should then be rinsed with clean deionized water.

Pressure resistance of bottles

Due to their thin walls, standard PTFE, PFA or FEP bottles should not be pressurised (from inside). Pressurisation could result in permanent deformation. More suitable for such applications are BOLA digestion vessels on page 163 or BOLA reaction vessels on page 154.

Plastics in microwave ovens

Plastics in general and fluoroplastics with their high thermal resistance in particular are suitable for microwave energy. The microwaves heat solely the contents of the vessel. Fluoroplastic vessels are particularly suitable for heating of aggressive chemicals such as acids or solvents. However, it should be noted that produced vapours are sufficiently drawn off. The more, a controlled drainage to a collecting vessel has to be arranged in case of bursture of the rupture membrane in the digestion vessel. Other vessels or containers than digestion vessels may only be heated when open.

Response times of temperature probes

The response time of a temperature probe is determined by introducing the probe to a step change in temperature and measuring how long the probe takes to reach a certain proportion of its final, steady-state reading. Normally, T₅₀ (the time taken to reach 50% of the final reading) or T₉₀ (the time taken to reach 90% of the final reading) are stated.

Field-proven method of determination: Put the temperature probe in an ice cold water bath and let it reach a steady-state. Then transfer it quickly to a column of steam and monitor its resistance until a steady state is reached again.

Fluoroplastics - Heating

It is difficult to heat PTFE due to its bad heat transmission and since the max. surface temperature may not be exceeded. There are different methods to heat PTFE vessels:

» Heating by a heating mantle with surface sensor:

When heating with a heating mantle, a large surface of the vessel is covered. This supports the heat transmission and reduces the heating period. The mantle must have a sensor on its surface. This probe measures the temperature on the surface of the PTFE and switches the mantle off upon exceeding +260 °C. Only this way temporary overheating and harmful decomposition products are avoided.

We advise against the use of "usual" heating mantles and control systems. Their use may result in the same effects as the use of hotplates (see below).

» Heating by a thermostat:

The heat transmission is provided by the bath medium (oils or other liquids). Controlled by an adjusted thermostat the temperatures on the surface of the PTFE vessel will not become too high. Depending on the immersion depth, a big surface for a good heat transmission is provided. The only disadvantage is the danger which occurs when working with oils at high temperatures.

Not appropriate methods are:

» Flame (e.g. gas burner):

With this method, the surface temperature cannot be controlled. Due to temporary overheating harmful decomposition products can occur.

» Hotplate:

Overheating can occur as well. Usual hotplates can only be switched on or off. During the heating period, the plate is heated with full energy so that it almost glows. Afterwards, the hotplate is switched off and only heats for a few seconds. This so-called „pointing“ is enough to exceed the maximum temperature of +260 °C. It does not make sense to put the adjusting knob only to +150 °C. PTFE labware char on the underside and glue to the hotplate. The thermoplastics PFA and FEP melt directly, similar to a hot-melt-type adhesive. This can be prevented by putting an aluminium foil between hotplate and vessels but dangers for health cannot be avoided.

Safety advice

Main risks and adversarial effects

Fluoroplastics are inert plastics, at normal use there are no risks for human health and environment. If the material is exposed to temperatures of more than +350 °C, it is possible that hazardous materials such as HF, COF₂ and others are released and can cause bad chemical burns which are not immediately noticeable.

Symptoms after contact

The materials released during thermal decomposition are very dangerous when getting in contact with eyes, skin or when being breathed in.

» **Eyes:** Redness, irritation, burning

» **Skin:** Redness, irritation, burning

» **Breathing in:** Headache, shortness of breath, illness, shivering, fever ("polymerisation-fever", raised pulse).

Special instructions for the case of breathing in:

The symptoms might only start some hours after breathing in. It is extremely important to seek medical advice to avoid lasting impacts!

First aid procedures

After breathing in it is extremely important to seek medical advice. The person concerned should immediately be brought to a place with fresh air. It is also necessary to give him/her oxygen. In case of apnoea it is necessary to give artificial respiration, possibly by mouth-to-mouth resuscitation.

» In case of eye contact rinse immediately with water for at least 15 minutes.

» In case of skin contact wash immediately with water and soap (especially the skin under the nails).

» Additionally seek medical advice!

Dangers of fire

There are possible risks due to acid and toxic production which can occur during thermal decomposition (HF and COF₂).

Precautionary measures in case of fire:

Take away the product from the fire but be careful. Stay against the wind direction and in sufficient distance. Appropriate extinguishing agents are water, CO₂, foam, earth/sand. Wear special clothes such as respirator and skin protection against HF-vapours.

Tubing - Pressure Resistance

PTFE Tubing

The graph on the right side will help you to determine the recommended working pressure (approx. 0.25 x short time burst pressure) for PTFE tubing. For working temperatures above +20 °C the working pressures stated in this graph have to be multiplied by the corresponding reduction factor. For temperatures below +20 °C no reduction factors have to be considered.

Example:

For PTFE tubing with inner diameter of 6 mm and a wall thickness of 1 mm the working pressure at +20 °C is about 8.8 bar. At a temperature of +50 °C, this value has to be reduced to 7.6 bar (**pressure 8.8 bar x reduction factor 0.87 = 7.65 bar**).

Temperature °C	50	75	100	150	200	250
Reduction Factor	0.87	0.77	0.68	0.53	0.39	0.28

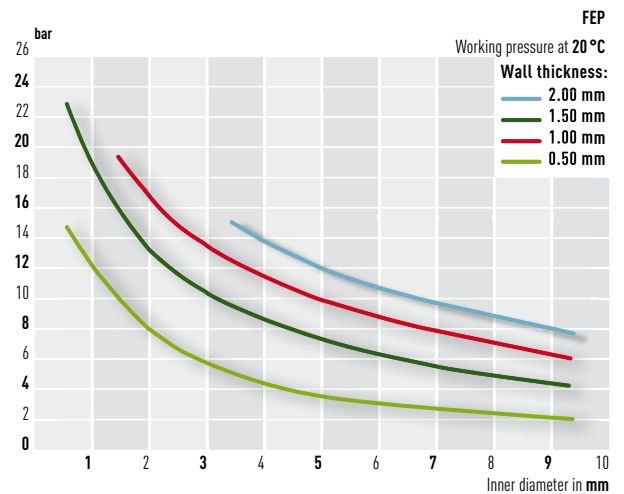

FEP Tubing

The graph on the right side will help you to determine the recommended working pressure (approx. 0.25 x short time burst pressure) for FEP tubing. For working temperatures from -50 °C to +150 °C the working pressures stated in this graph have to be multiplied by the corresponding reduction factor.

Example:

For FEP tubing with inner diameter of 6 mm and a wall thickness of 1 mm the working pressure at +20 °C is about 7.8 bar. At a temperature of +50 °C, this value has to be reduced to 6.1 bar (**pressure 7.8 bar x reduction factor 0.78 = 6.1 bar**).

Temperature °C	-50	0	20	50	100	150
Reduction Factor	1.13	1.04	1.00	0.78	0.45	0.21

PFA Tubing

The graph on the right side will help you to determine the recommended working pressure (approx. 0.25 x short time burst pressure) for PFA tubing. For working temperatures above +20 °C the working pressures stated in this graph have to be multiplied by the corresponding reduction factor. For temperatures below +20 °C no reduction factors have to be considered.

Example:

For PFA tubing with inner diameter of 6 mm and a wall thickness of 1 mm the working pressure at +20 °C is about 14 bar. At a temperature of +50 °C, this value has to be reduced to 12 bar (**pressure 14 bar x reduction factor 0.86 = 12 bar**).

Temperature °C	50	100	200	250
Reduction Factor	0.86	0.50	0.26	0.21

Tubing - Choice and Assembly

Choice of wall thickness

When choosing the wall thickness, a couple of issues have to be considered:

- » What max. pressure will be applied?
In the charts on page 226 the minimum wall thickness can easily be found.
- » To which temperatures will the tubing be exposed?
The maximum pressure has to be reduced by the stated factors.
- » Shall the tubing be applied under vacuum?
Then the wall thickness has to be sufficient (rule of thumb)

Rule of thumb for determination of wall thickness:

$$\text{outer-}\varnothing \times 0.1 \text{ (0.15)} = \text{wall thickness}$$

For a "normal" use in the lab, this rule of thumb offers a certain security concerning pressure and temperature, e.g. PTFE tubing with an outer diameter of 8 mm should have a wall thickness of 0.8 to 0.9 mm. In this case you should choose a wall thickness of 1 mm.

Fitting and tubing have to fit

Practice has proved that tubing varies in diameter. We therefore recommend to check before assembly whether the tubing outer diameter corresponds to the nominal size (e.g. \varnothing 6 mm). The values in the right chart will be helpful.

The surface of PTFE tubing can be damaged if V-rings are inserted by force and result in leakage.

Nominal- \varnothing of screw joint in mm	0.5–3,2	4.0–14	> 16
Recommended max. tolerance of tube/tubing in	± 0.05	± 0.1	$\pm 0,25$

Easy assembly

First check whether your laboratory screw joint (inner diameter) fits your tubing (outer diameter). If it is still difficult to put the tubing inside the inner parts of the laboratory screw joint, a trick can be helpful. Just either sharpen the tubing with a simple sharpener or cut it diagonally. You should now be able to easily put the tubing through the inner parts.

Transition from imperial to metric tubing

With BOLA Tube Fittings and Reducing Unions, transition from imperial to metric tubing or connections between both can easily be made. For example: A pipe socket of an analytical device with an outer diameter of 1/4" shall be connected to a PTFE tubing with an outer diameter of 8 mm.

Needed components: Reducing union 6 mm to 8 mm (Cat.No. D 526-10) and a set of tapered V-rings \varnothing 1/4" (6.35 mm; Cat.No. D 502-03).
By exchanging the 6 mm V-rings with the 1/4" V-rings, the pipe socket can be connected to the 1/4" reducing union and the 8 mm PTFE tubing on the other side.

Tubing - Useful hints

Thin tubing at vacuum and high temperatures

At high temperatures, under vacuum or with thin wall thickness we recommend to support the tubing in the laboratory screw joint. This can for example be made by using a short piece of glass or metal tube. Consequently, the tubing cannot turn off to the inside and become leaky. This trick allows also to connect elastic, gummy tubing to GL threads by means of BOLA Laboratory Screw joints.

Dimensional tolerances of PTFE, PFA and FEP tubing

All tubing listed herein match the sizes of the BOLA screw joint system. Therefore you can be sure that all fittings and connectors fit together. Practice has proved that all kinds of tubing have certain tolerances in both outer diameter and wall thickness. All tubing stated herein have been checked several times. This inspection based on strict rules stipulated by BOLA that exceed the demands for dimensions or quality control usually applied on the market.

In addition to the outer diameter, the wall thickness is important to evaluate the quality of tubing. We, at BOLA have stipulated stricter limits for the tolerances of the wall thickness than usually applied. Above all, we do not allow cumulative tolerances of the tubing dimensions to result in incorrect wall thickness. Thus, the wall thickness may only vary according to the outer diameter as stated in the chart on the right.

In addition, all tubing is carefully tested whether they show any faults in material (e. g. inclusion of impurities), any longitudinal or horizontal nerves or any reliefs at the outer and inner diameter.

Processing of heat shrinkable PTFE tubing

Shrinking should be done at a temperature of +340 °C +/-10 °C. (At approx. +327 °C the appearance of PTFE changes from white to transparent). Please note that the part to be coated has to withstand the shrinking temperature. Temperatures exceeding +350 °C lead to overheating of the heat shrinkable tubing and destroy its plastic memory (shrinking capacity). Thus, the tubing becomes unusable. Steady heating and cooling from all sides provides the best result, otherwise creases and tearing can arise. Appropriate heat sources are ovens or air heaters. We strongly advise against using gas flames as this can lead very easily to irregular overheating. Longitudinal shrinkage can occur during shrinking. The longitudinal shrinkage is approx. 15 %.

Nominal outer-Ø mm	0.4–2.9	3.0–10.0	10.1–16.0	16.1–22.0	> 22.1
Tolerance outer-Ø mm	± 0.05	± 0.10	± 0.15	± 0.20	± 0.20

Wall thickness mm	0.1–0.3	0.4–1.0	1.1–2.0	> 2.1
Tolerance mm	± 0.025	± 0.05	± 0.10	± 0.20

Example:

Nominal outer-Ø 16 mm ; min.-Ø 15.85 mm; max.-Ø 16.15 mm
Wall thickness 1 mm ; min. wall. 0.95 mm; max. wall. 1.05 mm

Both tolerances must not be added so that an even bigger discrepancy of outer or inner diameter would be possible!

Safety instructions:

Use adequate ventilation to assure removal of toxic vapours which may be produced by overheating!

Bending radius of PTFE, PFA and FEP tubing

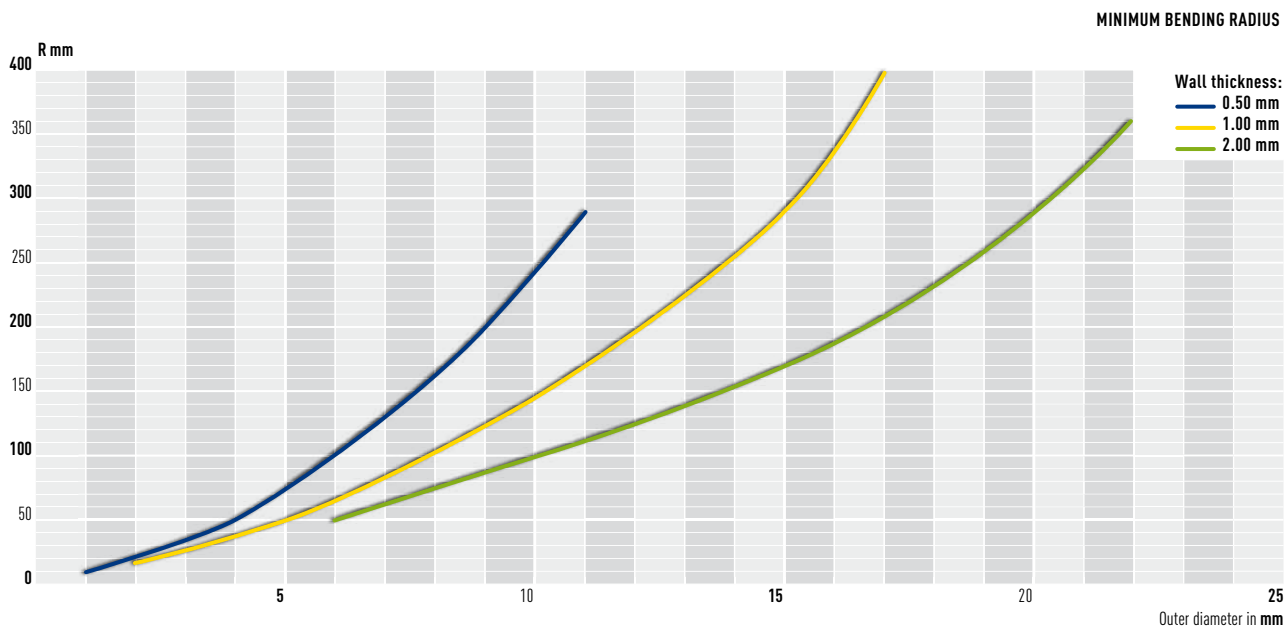

During the assembly of devices with fluoroplastic tubing we are often confronted with the problem of how to create the smallest bending radius when the space is limited. To avoid buckling of the tubing with all its negative aspects, the following graph will be helpful to determine the smallest possible bending radius.

Take the outer diameter indicated on the horizontal axis, then follow the line upwards until it crosses with the appropriate wall thickness. From this intersection, follow the line to the left until it reaches the vertical axis which shows the minimum bending radius.

Rule of thumb for the bending radius:

$$\frac{\text{outer}^2 - \emptyset}{\text{wall thickness}} = \text{min. bending radius}$$

As reference value, the smallest possible bending radius can be determined by the square of the outer diameter divided by the wall thickness.

Example: A PTFE tubing with outer diameter 10 mm and a wall thickness of 2 mm has a minimum bending radius of 100 mm.

Permeability of PTFE and PFA

Because of its special processing and the resulting structural conditions, PTFE has a higher permeability than other thermoplastics. PFA has at the same wall thickness a lower permeability than PTFE due to its tight molecular structure.

For applications with low permeability or diffusion rates, PFA and FEP tubing should be used.

Choice - of stirring elements

With the following we would like to assist you in the choice of stirrer shafts. All stated values are experienced data established by experimentation and practical testing. All stirring elements are made for clockwise rotation (view from the top of the stirring agitator).

The **diameter of the stirring shaft** depends on the products used as well as on their viscosity. The higher the viscosity, the larger the shaft diameter. If you are in doubt, you should choose always the larger shaft diameter, in most cases it is possible to reduce the chucking diameter.

Stirrer shafts with a diameter of 8, 10 and 16 mm are most commonly used. For standard applications up to a rotation speed of 350 rpm and a max. length of 600 mm, a shaft diameter of 10 mm will be sufficient. For stirring of high viscous products or shaft lengths over 600 mm, it should be checked whether the use of a stirrer shaft with 16 mm will make sense. Furthermore, adequate stirrer bearings and chucks at the agitator should be available.

Do not forget that the ideal diameter of the stirring element also will go through the "bottleneck" of your vessel, e. g. a ground joint or a flange. A tiltable stirrer blade might be helpful.

Example Propeller Stirrer Shaft:

Assumption: Inner diameter of the vessel (D) = 300 mm

1. Determination of the outer diameter of the stirring element
 $R = (0.2 \text{ to } 0.4) \times D$, thereafter follows 90 mm = 0.3×300 mm.
 Recommended outer diameter of the stirrer element is 90 mm.

2. Determination of the distance of the stirrer to the bottom
 $B = (1 \text{ to } 1.5) \times R$, thereafter follows 120 mm = 1.2×100 mm.
 The recommended distance of the stirrer to the bottom is 120 mm.

Signs and symbols:

- D** Inner diameter of the vessel
- R** Outer diameter of the stirring element (stirring diameter)
- B** Distance of the stirrer to the bottom
- H** Height of the stirring element

Propeller stirrer shafts

Stirrer shaft with several, inclined, arched and partly twisted blades. Also with draught tube. Stirring effect is based on a mainly axial flow which moves away from the agitator; changes in the blade inclination or rotating direction result in a change of the flow direction.

$$R = (0.2 \text{ to } 0.4) \times D$$

$$B = (1.0 \text{ to } 1.5) \times R$$

Discoidal stirrer shafts

Stirrer shaft with a blade with several, plane or curved paddles. Stirring effect is based on a radial, outwards directed flow with axial suction from the bottom and the top. The dispersing liquid is exposed to a high shearing.

$$R = (0.3 \text{ to } 0.4) \times D$$

$$H = 0.2 \times R$$

$$B = R$$

Impeller stirrer shafts

Stirrer shaft with three angular, arched paddles. The stirring effect is based on a radial flow which is diverted axially due to the ground level position of the stirrer.

$$R = (0.50 \text{ to } 0.70) \times D$$

$$H = (0.12 \text{ to } 0.17) \times R$$

$$B = (0.08 \text{ to } 0.18) \times R$$

Stirrer Shafts with rigid paddle

Stirrer with a narrow blade. The stirring effect is based on a radial and axial flow. The product is opposed to shear forces ranging from moderate to strong.

$$R = (0.70 \text{ to } 0.9) \times D$$

$$H = (0.05 \text{ to } 0.1) \times R$$

$$B = (0.10 \text{ to } 0.2) \times R$$

Stirrer Shafts with rigid blade

Solid, plane blade in user-defined form. Stirring effect due to different rotation speeds of the product displaced by stirring and the residual vessel content.

$$R = (0.4 \text{ to } 0.5) \times D$$

$$H = (0.9 \text{ to } 1) \times R$$

$$B = 0.3 \times R$$

Stirrer Shafts with angular blades

Stirrer shaft with several inclined, rectangular, straight blades (special form $\alpha = 90$ degrees, also curved blades). The stirring effect is based on an axially directed flow combined with an increased shear rate. Reversion of the flow can be obtained by changing the inclination of the blades or the rotation direction.

$$R = (0.30 \text{ to } 0.40) \times D$$

$$H = (0.15 \text{ to } 0.25) \times R$$

$$B = (0.50 \text{ to } 1.00) \times R$$

U-shaped stirrer shafts

Anchor stirrer blade adapted to the vessel's wall, reaches from edge to edge. The stirring effect is based on a mainly tangential flow with poor axial forces.

$$R = (0.90 \text{ to } 0.95) \times D$$

$$H = (0.50 \text{ to } 1.00) \times R$$

$$B = (0.003 \text{ to } 0.005) \times R$$

Double impulse stirrer shafts

Stirrer shaft with two contrarily aligned blades on a radial arm. The stirring effect is based on an axial flow with poor radial forces. Analogue to the conveying direction of the blades an axial flow arises near to the shaft. The conveying direction of the outer paddles is adapted to the mixing demands.

$$R = 0.70 \times D$$

$$H = 0.20 \times R$$

$$B = 0.28 \times R$$

Stirrer shafts - Maximum Revolutions Per Minute

We would like to give advice on the appropriate RPMs, but unfortunately this question is not easy to answer. The following data are based on field-experience tests done with BOLA stirrer shafts.

Those tests have shown that it is not possible to state a maximum RPM but the range in which the shafts vibrate heavily. Such vibrations are called resonance. At a certain speed, a superposition of the oscillations takes place and the resonance becomes visible as vibrations. Due to those vibrations the bearings of the agitator are exposed to high stresses and in worst case accidents can be caused by tipping over agitators. The use

of liquids as medium can reduce vibrations, worn out agitator bearings or insufficient stability of the agitator support increase vibrations.

In practice, these "critical RPMs" should simply be avoided by either staying below or skipping quickly this "critical RPM range" to obtain a quiet running stirrer shaft. **In general:** the longer a stirrer shaft is, the larger its diameter should be.

The chart

shall help you to choose the right stirrer shaft respectively to determine the maximum RPM. As many different parameters affect the quiet running of a stirrer shaft, it is recommended that the user will test it under his own conditions.

Please note that for double impulse stirrer shafts the critical RPM range lies 200 rpm below the stated values.

- » **Green Area** – indicates up to which rpm the shaft will not be affected by vibration
- » **Red Area** – marks the critical RPM range. These rpms should be avoided whenever possible.
- » **Blue Area** – is reached after quick skipping of the critical RPM range, vibration seldom occurs, however, agitators and stirrer shafts are extremely stressed by high RPMs. Therefore we recommend to use stirrer shafts only in the green range – if possible.

Stirrer - Magnetic Stirring

Magnetic stirring is a widely used method of stirring and mixing in liquid media. This process can be used over a broad temperature range and with virtually any chemical agent, as well as in open and closed systems, under pressure or vacuum.

The basic system consists of two components:

a stirrer magnet placed in the liquid and a magnetic drive located outside the vessel. Both, stirrer magnet and magnetic drive form a magnetic circuit. For trouble-free stirring in liquids with different viscosities the magnetic drive shall have a wide range of different speeds. That is why the strength and form of the magnetic circuit between stirrer magnet and drive magnet is so important.

The **stirrer magnet** is a bar magnet encapsulated in a material which protects the magnet and prevents contamination of the liquid medium.

The core of the stirrer magnet is usually Alnico V, a less used alternative is Samarium-Cobalt. Due to its exceptional chemical and thermal (-200 °C to +260 °C) properties, Polytetrafluoroethylene is the most preferred encapsulant. It can easily be processed, is readily sterilised and satisfies FDA and USP Class IV requirements.

In principle, it is difficult to find the most effective magnetic stirring bar for a particular application, but important factors are the vessel shape and the viscosity of the stirring medium. In a petri dish, a long stirring bar at low speed will be effective, in a round bottom vessel egg-shaped (oval) magnetic stirrers will be a suitable choice. The ideal configuration is where the magnet of the stirring bar and the magnet of the drive are of equal length and with a minimum distance between them.

A Cylindrical magnetic stirring bar » B Oval or Egg-shaped magnetic stirring bar » C Magnetic stirring bar with bearing neck » D Magnetic stirring bar for cuvettes » E Magnetic stirring bar for culture bottles » F Custom manufacture for flanged reactors

The increase of the magnetic strength by using a SmCo magnet may be advantageous for many applications. However, this can have also negative consequences:

» Migration

Where the stirrer magnet and drive magnet have very different lengths, the stirrer magnet can migrate to a pole of the drive magnet.

» Braking

A very powerful force between drive and stirrer magnet can result in a braking effect. Due to the pressure of the stirrer magnet on the bottom of the vessel, the speed of rotation is reduced and rotation can even be prevented.

In general, no advice for or against a certain stirring bar form can be given. In case of doubt, a test of different stirring bars under your own conditions may be helpful.

The second part of this stirring system is the **magnetic drive** that consists in its simplest form of a simple, speed controlled induction motor or a stepper motor. In some cases the motor incorporates automatic reversing to improve mixing. Normally, the drive magnet is a simple square bar magnet, a U-magnet or a composite SmCo-magnet. Its rotation induces rotation of the stirrer magnet in the liquid. The designated speed can be adjusted by an incorporated speed control.

Determination – Thread Types

In daily practice it is often necessary to choose a suitable fitting. Due to the multitude of different threads this is not always easy. The following drawings shall give you some assistance.

Like shown on the picture, it can be helpful to determine the thread size by putting it on our drawing which is, of course, in full size. Also all information on outer diameter and thread pitch (i. e. distance from thread tip to thread tip) can be determined with a little skill. The form can mostly be recognised easily.

We will help you should you still have problems in determining your thread. Just send us a sample or counterpiece, we will be glad to help you with your choice. But please understand that we are not able to determine fitting threads on faxed copies.

NPT (National Pipe Taper) thread

American pipe thread or BSP (British Standard Pipe) thread

Easy recognisable by its tapered outer and inner diameter which is self-sealing. Therefore, NPT threads are also known as "sealing thread" or "tightly threaded connection".

NPT 1/8" – outer- \varnothing = 9,9 mm

NPT 1/4" – outer- \varnothing = 13,2 mm

NPT 3/8" – outer- \varnothing = 16,6 mm

NPT 1/2" – outer- \varnothing = 20,6 mm

NPT 3/4" – outer- \varnothing = 26 mm

NPT 1" – outer- \varnothing = 32,5 mm

R or G thread (Whitworth)

Cylindrical threads which are mainly used in countries with imperial system. The size of e. g. R 3/4" does not stand for a diameter. Thus the corresponding size has to be determined according to charts.

G 1/8" – outer- \emptyset = 9,6 mm**G 1/4"** – outer- \emptyset = 13 mm**G 3/8"** – outer- \emptyset = 16,5 mm**G 1/2"** – outer- \emptyset = 20,8 mm**G 5/8"** – outer- \emptyset = 22,8 mm**G 3/4"** – outer- \emptyset = 26,3 mm**M thread (metric ISO-thread) – standard in Europe**

Cylindrical inner and outer diameter which is precise in millimetres. The extremely fine taper of this thread allows the best possible force transmission. Metric threads are designated by a capital M plus an indication

of their nominal outer diameter, for instance M 10. A taper deviating from the standard is marked with an appendix like for instance M 10 x 0.75.

M 5 – outer- \emptyset = 5 mm**M 6** – outer- \emptyset = 6 mm**M 8** – outer- \emptyset = 8 mm**M 10** – outer- \emptyset = 10 mm**M 12** – outer- \emptyset = 12 mm**M 16** – outer- \emptyset = 16 mm

Determination – Thread Types

UNF 1/4"-28G thread

It has its origin in the USA. Mainly used in chromatography/HPLC applications. Most common sizes are UNF 1/4"-28G and UNF 10-32G. The digits 28 G and 32 G stand for the number of thread pitches at a length of one inch (25.4 mm).

UNF 1/4"-28G versus M 6

Without exception all BOLA HPLC fittings come with the most common HPLC thread UNF 1/4"-28G. In addition, fittings and distributors with the

very similar thread M 6 are used. These threads can only be distinguished by exact determination of their outer diameter or by using a test mandrel (it is possible to screw in a tube end fitting in the counterpart of the other thread for at least 2-3 rotations). The UNF 1/4" thread has an outer diameter of 6.35 mm, the M 6 thread has precisely 6 mm (work tolerances are possible). We recommend to use only the UNF 1/4"-28G thread to avoid confusion and double inventory.

UNF 1/4"-28G – outer-Ø = 6,2 mm

UNF 3/8"-28G – outer-Ø = 9,4 mm

UNF 1/2"-28G outer-Ø = 12,6 mm

UNF 5/8"-18G – outer-Ø = 15,7 mm

UNF 3/4"-16G – outer-Ø = 18,9 mm

UNF 1"-12G – outer-Ø = 25,2 mm

CANISTER THREADS

S 55 – outer-Ø = 53,5 mm

S 60 – outer-Ø = 59,5 mm

BARREL THREADS

BCS 70x6 MAUSER 2"®

G2" / R 2" / BSP 2"®

BCS 56x4 Tri Sure2"®

Determination – Thread Types

GL-threads

GL threads are round threads, i. e. there are only round and no sharp ends at the flanks of the screw thread. Due to its simple shape and the round ends of the flanks, this thread can easily be formed on glass pipes.

The extremely high pitch and the large flanks give this thread an important carrying power.

GL 12 – outer- \emptyset = 12 mm

GL 14 – outer- \emptyset = 14 mm

GL 18 – outer- \emptyset = 18 mm

GL 25 – outer- \emptyset = 25 mm

GL 32 – outer- \emptyset = 32 mm

GL 45 – outer- \emptyset = 45 mm

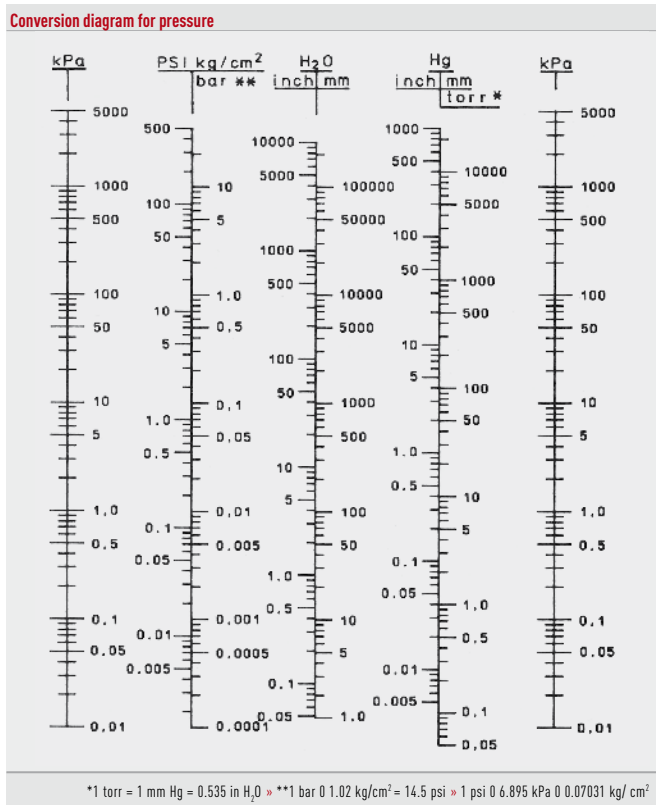

GLS 80 – outer- \emptyset = 80 mm

BOLA's commitment

261

For the environment

BOLA takes its responsibility for the environment seriously. Our responsibility is not only a respectful handling of natural resources but also avoiding waste and integration of recycling in the production process.

- » Even during the machining of PTFE (e. g. drilling, turning or milling) all cuttings are collected by means of suction through a special tube system directly on our machines. All chips as well as remnants of semi-finished items are sorted according to their purity and stored contamination-free in large containers before later being recycled. During recycling, all chips and remnants are converted by a specially developed process into usable semifinished items.
- » With regard to the environment, disposable products are no longer in our mind. Therefore all our products are designed for long-time use.
- » Generation of chips can be avoided by using moulded parts. In addition, moulding reduces the consumption of PTFE powder and energy.
- » Products made of the most common fluoroplastics are free of plasticizers and solvents. Thus, they are not harmful for the environment.

For the Caritas workshop in Gerlachsheim

Approximately 100 workplaces for disabled and mentally sick persons have been created in Gerlachsheim since 1983.

This facility offers a comprehensive range of work and care propositions and facilitates the integration of disabled and mentally sick persons in society and working life in close collaboration with the psychiatric ward of the County Hospital Tauberbischofsheim, the society for open psychiatry, the social-psychiatric service, the integrational service, group homes for disabled people, attendants and family members.

The most important objective is to enhance their performance and results, which are comparable to the requirements of private enterprises and thus pave the way for a normal working life including an independent way of life.

BOLA supports the objectives of the Caritas workshop with orders in the fields of assembly and packing.

For "Class 2000"

"Class 2000" is an integrated educational concept that has been developed by primary school teachers and specialists of the areas medicine, psychology, as well as sport and nutrition science. The main objective is to convey life competences to school children and teenagers so that they will be able to cope with the challenges of life. Self-esteem and courage are strengthened – the best prevention of alcohol or drug addiction and violence. BOLA is committed to these objectives and gladly supports the project "Class 2000".
